

Verisq AI Privacy Governance Platform

AI-Powered Self-Service. *All-In-One.*

The rapid evolution of privacy regulations like GDPR, CCPA, HIPAA, and SOX has fundamentally transformed how organizations must protect and manage personal data. Verisq is an AI-powered privacy platform that simplifies vendor risk, impact assessments, and privacy rights management through self-service workflows—enabling teams to scale their privacy programs while demonstrating diligence to regulators. All without increasing headcount!

Discover

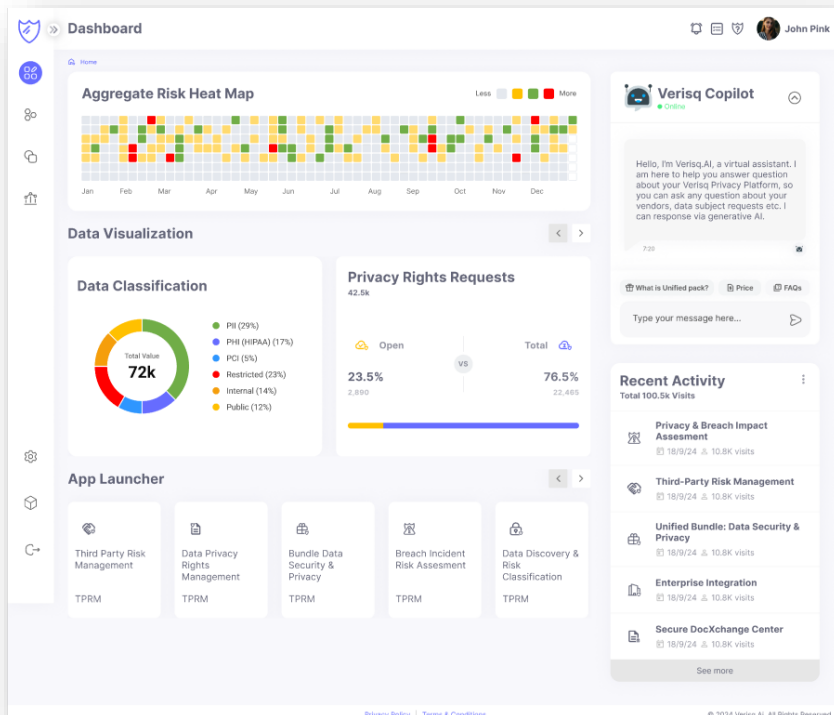

- Automatically discover and identify—PII, PCI, PHI across structured and unstructured sources.

Automate

- AI-driven workflows automate privacy tasks like assessments, rights requests, etc.

Scale

- Grow your privacy program while maintaining consistent diligence.

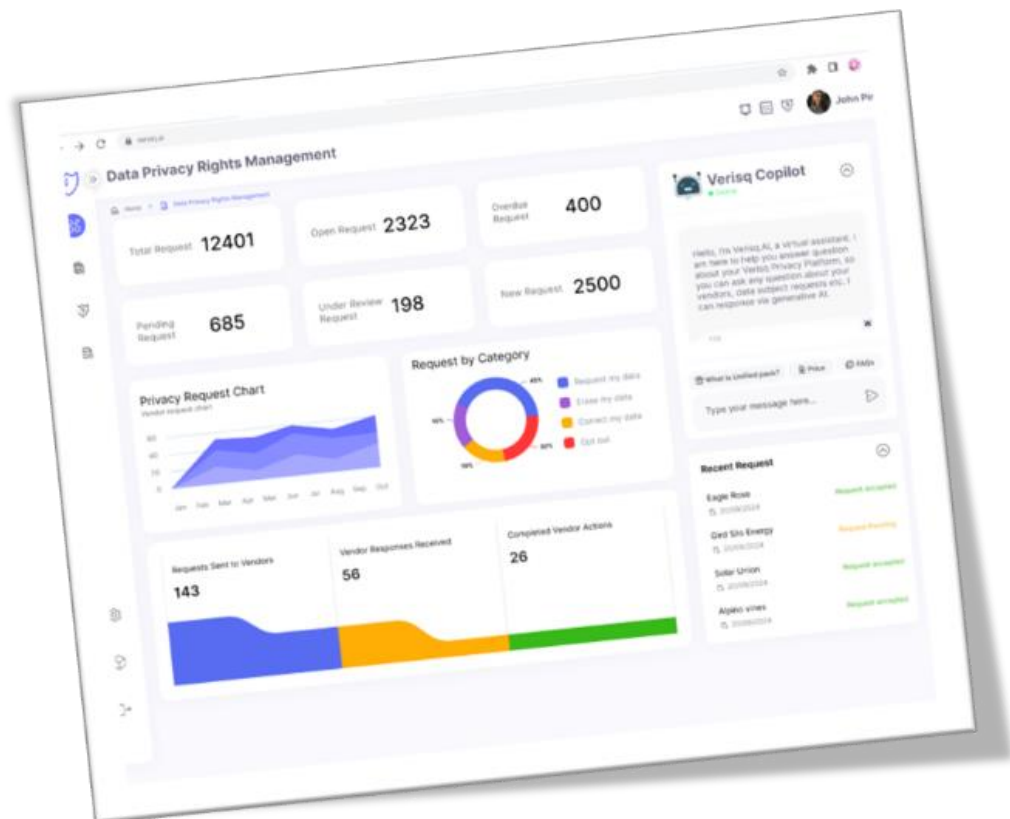

Regulations & Frameworks: GDPR, CCPA, HIPAA, VCDPA, NIST CSF, NIST Privacy, CIS, ISO 27701, AICPA SOC

Demonstrate Privacy Compliance to Regulators!

- **AI-Powered Automation**
Intelligent threat modeling enables efficient, consistent privacy operations
- **Self-Service Workflows**
Empower teams to manage privacy tasks independently
- **Scalable Operations**
Handle growing privacy demands without increasing headcount
- **Continuous Monitoring**
AI-powered controls maintain ongoing privacy diligence
- **Unified Management**
Single platform for streamlined privacy operations and regulatory reporting
- **Automated SOC Review & CUEC Management**
AI-powered analysis of SOC reports with automated CUEC tracking and validation
- **LiveThreat™ Cyber Threat Intelligence (CTI)** is our AI-powered core that analyzes vast amounts of real-time threat data.

Module Name	Description
SOC I/II Risk Quantification	AI-driven risk scoring engine that quantifies privacy and security risks in financial terms, enabling data-driven decisions about risk mitigation investments
Data Discovery & Classification	Automatically maps and discovers sensitive data across structured and unstructured sources, providing complete visibility into personal data landscape
QFX Assessment Framework	AI-powered assessment engine that automatically processes and scores complex privacy evaluations without requiring expert review
Third Party Risk Management	Automates vendor risk assessments and provides continuous monitoring with real-time threat detection and automated remediation tracking
Data Subject Rights Management	End-to-end automation of privacy rights requests from intake through fulfillment with built-in request validation and response generation
Privacy Impact Assessment	AI-guided privacy impact assessments with automated threat modeling and dynamic questionnaires that adapt to project context
Breach Incident Risk Assessment	Automated incident detection, classification, and response workflow management with built-in notification requirement analysis
Enterprise Risk Register	Centralized risk tracking with automated assessment, scoring, and continuous monitoring of privacy risks across the organization

About Verisq AI

Verisq, the Privacy Intelligence Company, revolutionizes privacy compliance through AI-powered automation that enables organizations to scale their privacy operations without relying on scarce experts. Founded by enterprise privacy and security veterans, our platform combines advanced AI with deep privacy expertise to democratize privacy management while maintaining enterprise-grade compliance standards.
