

# Azure Synapse Data Lake Accelerator

## Assess and understand your options when modernising your data with Azure

Version 1's Azure Synapse Data Lake Accelerator helps customers of all shapes and sizes to consolidate data from a wide range of sources and formats and migrate to cloud utilising an Azure Synapse-managed Data Lake. This provides an accelerated foundation for development of a centralised Enterprise Data Warehouse.

With this assessment, organisations can identify the complexities in migrating from multiple platforms to Azure - and put in place a robust plan to navigate the modernisation of their data estates.

### Accelerator Phases:

**Source Data Assessment** - We will use the outputs of this process to review the structure & content of your existing data.

**Data Process Review** - We will review your existing data processes to understand your data lineage, and the complexity of any business transformations which may need to be applied.

**BI Platform Audit** - Your existing infrastructure may support a variety of BI / Data Visualisation tools, and analytic use cases. We will review the existing estate to understand your current tools and usage patterns.

### Use Cases

- Current State Assessment that helps to identify:
  - Data Quality Concerns
  - Data Distribution
  - Translations
  - Optimisations
- Data Migration Strategy
- BI / Visualisation Analysis
- BI Tool Upgrade and Migration Roadmap

### Highlights

Version 1 has been working in the Microsoft cloud technology arena since 2006. With deep expertise across the Microsoft stack, Version 1 is recognised as one of the most competent partners in the ecosystem.

**Microsoft Partner**  
Azure Expert MSP
