

Business Value Assessment

Targeting Modernisation
To Deliver Business Value

Modernise with purpose. Accelerate transformation with stakeholder-backed value - on Microsoft Azure

Version 1's Business Value Assessment (BVA) helps organisations bridge the gap between business strategy and technology transformation. It's a focused engagement that identifies what matters most to your stakeholders and translates those needs into a modernisation roadmap built on Microsoft Azure.

Whether you're transforming legacy applications, planning a cloud migration, or exploring the potential of Azure-native AI and data capabilities, the Version 1 BVA provides the clarity, alignment, and evidence needed to move forward with confidence.

With deep technical expertise and real-world delivery experience, Version 1 enables you to prioritise the right investments, reduce risk, and accelerate time-to-value.

Here's what our Business Value Assessment includes:

- Discovery workshops to surface business priorities, technical pain points, and stakeholder goals
- Analysis of your current estate to understand legacy system dependencies and transformation constraints
- Business-to-technology mapping: align critical business outcomes with Azure platform capabilities
- Identification of key value drivers and blockers for transformation
- Prioritised roadmap for modernisation, phased and structured for delivery value
- Business case support: financial and technical justification for decision-making
- Technology recommendations leveraging the Azure ecosystem, including:
 - Azure OpenAI & Microsoft Fabric
 - GitHub Copilot & DevOps tooling
 - Azure Kubernetes Services (AKS) & containerisation
 - Azure SQL, Cosmos DB, .NET Core, and more

Highlights

- Aligned to your business priorities and stakeholder goals
- Built on deep Microsoft Azure expertise
- Accelerates transformation while reducing risk and focussing on business value
- Supports stronger business cases with quantified value

Outcomes

- A prioritised roadmap for Azure-based modernisation
- Clear mapping of business drivers and value to Azure services
- Identified pain points, opportunities, and value levers
- Business and technical justification for next steps
