Self-service SAP ERP data access

VirtDB provides solutions to prepare and push SAP R/3 or S/4HANA data to Tableau Desktop or Server and databases that conforms to SAP licensing policy.

We enable your business users to access operational data faster, at minimal cost without compromising existing data governance.

Data Unfolder is VirtDB Inc's leading product, helping organizations democratizing SAP ERP data access and analytics.

Data Unfolder runs inside the SAP system so you can use it's services right from the regular SAP user interface under your own SAP user privileges. No external ad-hoc or batch users are required to log in to your SAP system, data flow is controlled and executed by SAP services.

Whenever an SAP user views data in their regular SAP UI, a new submenu will be available to extend, narrow or otherwise modify the data set and push it to Tableau or further external tools with a few clicks. Data Unfolder runs as an ABAP add-on plus non-SAP libraries installed to the SAP Application server.
