

Virtusa's Hybrid Cloud Management offering using Azure Arc

Changing management and governance tools make it increasingly challenging for enterprises to control and govern complex systems. **The difficulty grows exponentially for organizations managing both the cloud and existing on-premise infrastructure.**

Virtua's Hybrid Cloud Management offering uses Azure Arc to build a strategy for addressing organization-wide hybrid cloud complexity. It sets up and implements consistent inventory, performs management and governance, ensures security and patch management, and monitors the IT infrastructure across any environment regardless of resource location.

Standardize your enterprise governance with Virtusa's Hybrid Cloud Management

Virtusa's solution enables companies to create a hybrid cloud management strategy using Azure Arc. Built with industry-specific standards and guidelines, our solution:

Delivers consistent security across cloud landscapes and brings all resources under a single governance model

Provisions policy-driven deployment across connected systems, including servers and workloads

Establishes regulatory standards and corporate compliance anywhere on the cloud or on-premise

Additionally, our large-scale execution and implementation expertise authorize rapid deployment, allowing the organization to experience benefits faster.

Manage workloads with Virtusa's Hybrid Cloud Management offering

Virtusa's Hybrid Cloud Management offering using Azure Arc provides the governance and management practices for both cloud and on-premise environments in a single pane. This also helps implement the security features for the overall Azure infrastructure components.

Adopting this approach standardizes your operations, maintains cost control, and establishes business continuity.

US-based IT service organization solves governance and compliance challenges with Virtusa's Hybrid Cloud Management using Azure Arc

An IT services organization with ever-growing internal workloads and inventory with cloud infrastructure had challenges keeping abreast of organizational policies, guidelines, and security.

With Virtusa's Hybrid Cloud Management using Azure Arc, the organization was able to manage internal workloads and organize cloud inventory swiftly and consistently. A consistent way to deploy and manage systems in a disparate environment was created with policies and tagging. The offering helped the organization maintain unified compliance and governance of resources across multiple estates.

The organization had central visibility of the resources across landscapes and was able to achieve automated and enforce policies to meet data governance and security requirements.

Benefits include:

Reduced time for security challenge mitigation and prevention.

Unified governance and security across landscapes.

One-touch push updates for all inventory across the enterprise.
