Accelerate digital transformation using Microsoft Power Platform - a business assessment by Virtusa

Onboarding digital adoption at the enterprise level using Power Platform

Digitalization of business applications and process automation is essential for an organization to remain competitive in the market. For successful digital transformation, organizations must take a holistic approach to plan and set up the right transformation road map by adopting appropriate technologies with long-term objectives.

With extensive experience in managing and running large transformation programs on the Microsoft Power Platform, Virtusa's business process and application assessment provide a clear road map for digitalizing legacy applications and processes by addressing and mitigating the challenges.

We help organizations lay a strong digital foundation using the Power Platform ecosystem. Our process mitigates challenges and risks by doing end-to-end (Design to Go-live) proof of concept by transforming all essential legacy end-user computing applications and automating tedious business processes.

Why clients are choosing Virtusa

Virtusa has various Power Platform offerings such as services, adoption workshops, and strategic initiatives to help your enterprise accelerate digital transformation and leverage the benefits of advanced Microsoft low code and no-code technology.

As a Microsoft Gold Partner, Virtusa offers end-to-end services like consulting, custom development, migration, and upgrade applications on the Power Platform and M365 vertical.

Benefits of this assessment :

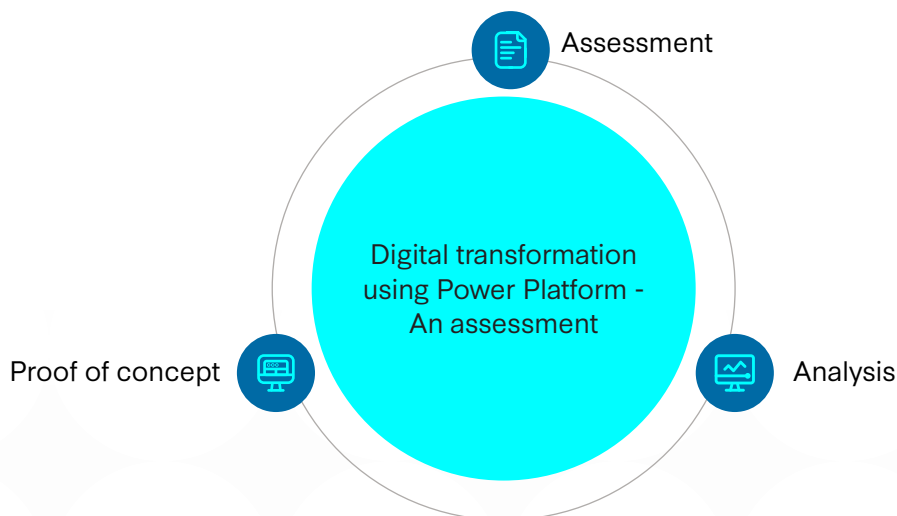

- Accelerate digitalization using Power Platform and increase collaboration in the organization
- Highlight effective business processes with automation potential to improve overall productivity
- 25-30% reduction in time on analysis, assessment, and POC phase
- Digitalization road map with approximate next three years cost and ROI
- Retirement of legacy applications
- Foundation for robust application governance & security

Capabilities

Redefine your digital adaptation journey using the Power Platform with Virtusa.

Our proven assessment methodology does a 360-degree analysis of EUC applications and critical business processes, including data and security.

Using Virtusa's 3R matrix (Retire, Retain, Re-Platform) framework, we prioritize business application lists and perform proof of concept for critical business processes and applications. This process mitigates the potential risk and enables organizations to enter the digital age using the Power Platform ecosystem.

Success stories

A European bank adopted the Power Platform-based digital transformation journey using Virtusa's offering and did a holistic assessment with POCs to mitigate future risks.

The client planned to embark on a digital transformation journey to optimize the cost, security, compliance, and governance process. They wanted to assess existing EUC applications and business processes and develop a transformation roadmap.

Virtusa did a robust assessment of existing EUC applications and processes and helped the client produce a realistic and practical list of applications and business processes for digital transformation. Using the Power Platform offerings, we helped the client implement these processes and transform applications using a fusion development approach.

Benefits

67% reduction in the number of manual processes by automation

85% reduction in the number of EUC Applications

Security and Reliability Improvement

Robust Application Governance & Controls
