

Delivering Sitecore with Agility & Quality

Challenges with DevOps practices impede speed to market and application quality preventing effective digital marketing execution

Digital Transformation efforts hinge on faster software delivery.

DevOps tooling maturity and understanding what to invest in is a consistent challenge.

Improve delivery quality by implementing an already vetted toolset using Sitecore and Azure best practices.

What is Sitecore DevOps Toolchain?

Sitecore DevOps is a 3 week engagement that includes a 2-day workshop, a current state technical assessment, a proof of concept DevOps stack, and a cloud ready application modernization roadmap.

Why customers use Sitecore DevOps Bootstrap

- Increase speed to market for developed features
- Improve quality of deployments and system uptime
- Realize an ROI on DevOps investments
- Better metrics in 4 key outcomes of DevOps success: Mean Time to Recovery (MTTR), Change Failure Rate, Feature lead time to production, and release velocity.

Proven Tooling & Practices

- Vetted set of Azure DevOps tools
- Sitecore + Azure best practices
- Reduce defects through proven tools & practices

Ready Built Delivery Speed

- Proven experience with Azure and Sitecore
- Combining Azure DevOps with VMLY&R's deep experience

Cloud Ready

- Build upon Azure DevOps
- Sitecore PaaS & Azure
- Simple scalability

Increased systems scalability, seamlessly

Enhanced system stability through Azure

Automate more than 85% of the engineering and deployment workflow

Launch Sitecore PaaS on Azure DevOps Rapidly

Faster Speed to Market

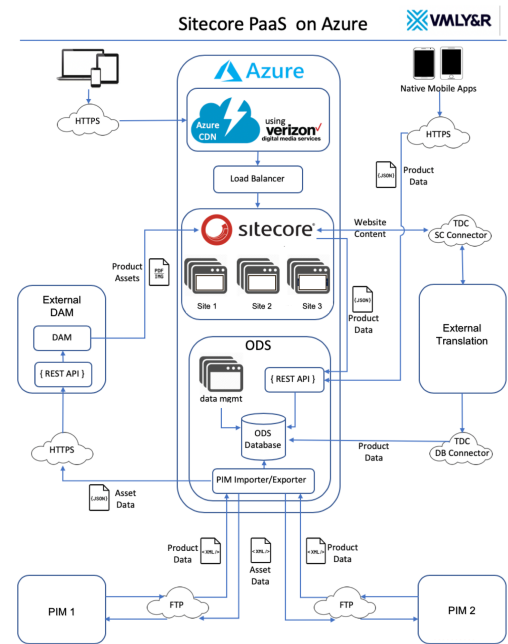

- Repeatable DevOps processes speed deployments
- Automated testing as part of DevOps reduces defects in production
- Increased site uptime

VMLY&R's Experience and Understanding

- 10+ years experience with Sitecore
- 12+ years Microsoft Partner
- Digital technology leader for over 25 years
