Intranet Hub Consulting
A Viva Connections Offer

One of the most important assets in your business is not just the information, but the way how people inside your organization access to it, the way they receive news, communications, reminders and how they collaborate to each other sharing all types of files and documentation.

Having a centralized, functional, and attractive online site, which can be an intranet, a communication or collaboration site all in one is for sure the key for improvement in productivity, assertiveness, security, automation and more.

With VNEXT Intranet Hub Consulting, you can not only achieve all those benefits but also leverage the features of Viva Connections with the experience of VNEXT consultants in designing, customizing, and deploying solutions based on SharePoint Online, Teams, Power Platform, and Microsoft 365.

Over this consultive experience, we will provide a cycle of design, customization, and deployment of interactive and visually effective components for your organization. The cycle only ends once your objectives of modernizing, communicating, and automating have exceeded your expectations.

Solution Components

SharePoint Online

Microsoft Teams

Microsoft 365

Benefits of The Solution

- **One access point** - Integration of SharePoint sites (Intranet/Communications sites/Hub sites) with Teams

- **Easy navigation** - Easily access SharePoint sites, frequent sites, news, files, one drive, etc

- **Searching what you need from Teams** - Search over teams and over your SharePoint sites using the Teams search engine

- **News, dashboards, feeds, resources and more consolidated in your SharePoint sites**

- **Desktop and Mobile access** – Use your teams' mobile app to access the same content you access from teams in a very friendly user interface

- **Target your audience** – You can decide who has access to specific content to provide a more secure and customized experience for the business units of your organization

- **Customize functionalities by using web parts and/or adaptive cards** – Automate specific functionalities from your intranet/sites like reminders, dashboards, timesheets, calendars, employee of the month, birthdays or any other custom component all of that can be deployed to be easy and user friendly accessed from Teams and SharePoint
