

Project Harmony

A holistic Microsoft Solution
by VST ECS Phils., Inc.

Hybrid work is the new normal

But it can be challenging to equip the new workplace

A modern device strategy is essential for your workforce—and a win for your business

- Provide a flexible, energizing work environment
- Renew productivity, creativity, and innovation
- Retain your talent by heading off burnout

Employees want flexible work options and technology that doesn't complicate their lives.

Teams need better tools for remote collaboration and productivity.

IT environments are complex, with more outside devices connecting to internal networks.

Remote provisioning, deployment, and management of devices are becoming standard.

Privacy and cyberthreats require more advanced security across devices, users, apps, and their data.

Surface solves for

Simpler IT processes

Zero-touch deployment and remote management drive down costs and complexity

Accessibility

Design that focuses on inclusion, learns from diversity, and benefits people universally

Productivity

Flexible, premium devices that let people work and collaborate naturally, in the ways they prefer

Security

Security that extends from chip to cloud within the Microsoft ecosystem

Sustainability

Responsible design, sourcing, and manufacturing with sustainable experiences and circularity

Microsoft Surface for Business

Experiences you can count on

Only Microsoft

Integrated productivity with Office 365

Microsoft 365 security from chip to cloud

Remote management with Windows 11

Innovation

LTE options for ultimate connectivity

Power to run intensive business apps

All-day battery life

Premium design

Versatile form factors

Gorgeous 3:2 displays

Mics, speakers and cameras

Premium inking and touch

Roaming customer service

- Branch work
- Nurses
- Shop floor operations
- Retail floor workers
- Students

Field servicer

- Mobile care workers
- Field technicians
- Case workers
- First responders
- Facilities operators

Mobile sales representatives

- Pharmaceutical sales reps
- Assistant district attorneys

Customer relationship managers

- Wealth advisors
- Insurance adjustors
- Physicians
- Retail store managers
- Athletics directors

Information workers

- Sr. managers
- Consultants
- Office workers

Executives

- Financial directors
- Legislative staff
- Principals
- School admins
- Professors

Engineers, designers, researchers

- Investment analysts
- Product designers

Office 365 Fundamentals and Windows Autopilot

Verney Nathaniel Araullo
Microsoft Solutions Engineer

What is Microsoft 365?

Office 365 includes the latest Office apps for your PC and Mac (like Word, Excel, PowerPoint, and Outlook), and a full suite of online services for email, file storage and collaboration, meetings, and more.

How does it work?

enables your entire team to work better than ever before

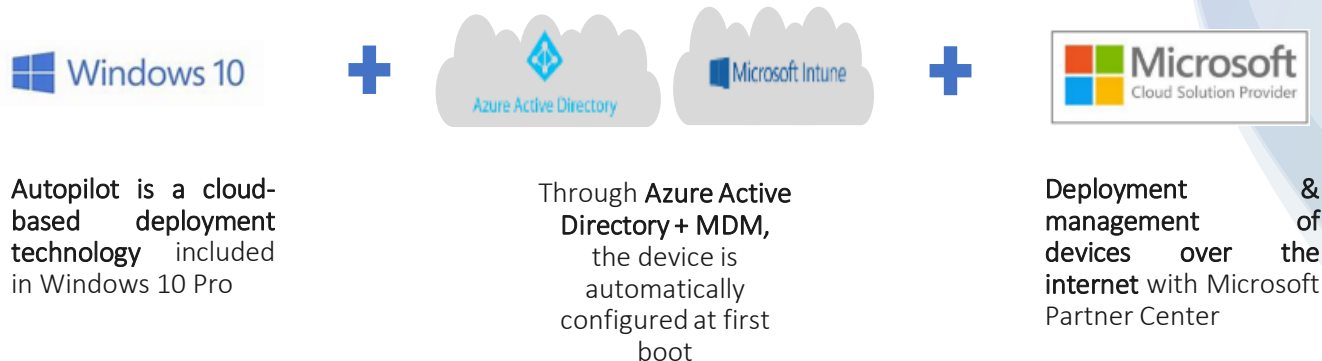

Enterprise Mobility + Security and Microsoft Intune

- Microsoft Enterprise Mobility + Security (Microsoft EMS) is intelligent mobility management and security platform.
- EMS helps protect and secure your organization with its products that act to increase security features of Windows 10 and Microsoft 365

What is Windows Autopilot?

A cloud-based deployment technology available in Windows 10 Pro. It enables **deployment & configuration of devices over the internet** through Microsoft Partner Center. It also **requires Azure Active Directory & MDM** to manage and configure devices via automatic enrollment in these solutions at first boot.

Unbox. Log in. Take off.

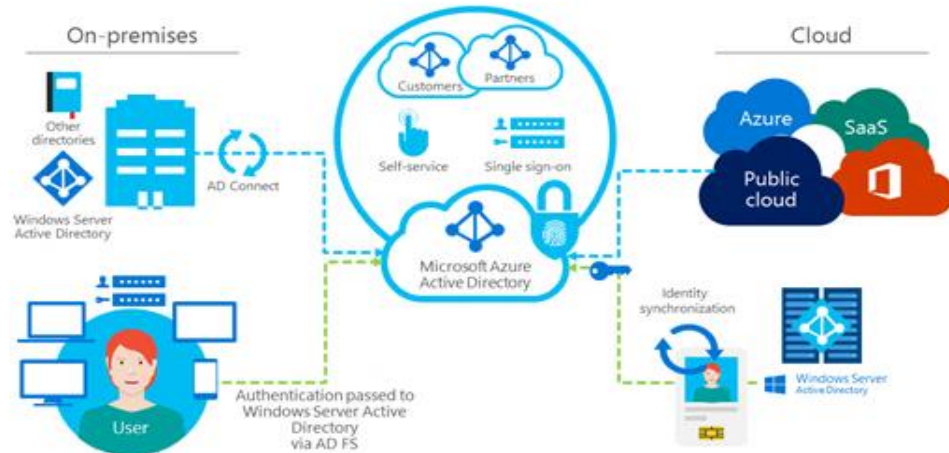

- Device deployment made simple
- Simplified device management
- Secure protection out of the box
- Improved Employee satisfaction

The world is changing..

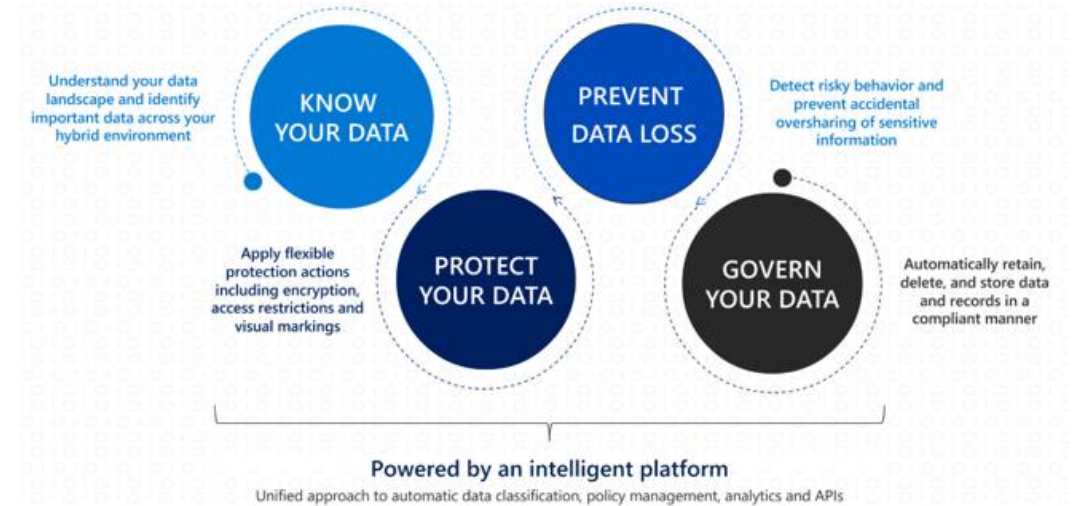

- Corporate applications and data are moving to hybrid and cloud environments.
- Organizational assets, resources, and data are being accessed outside the corporate network
- Security perimeter now extends to every access point that hosts, stores, or accesses corporate resources and services

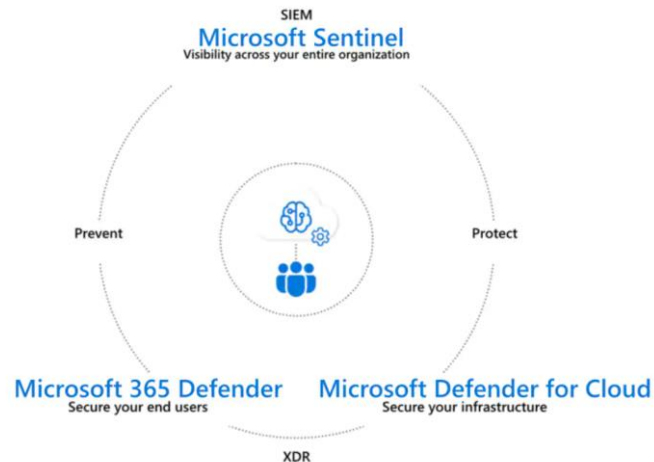

Identity and Access Management

Information Protection

Threat Protection

Cloud Security

Strengthen your cloud security posture

Optimize the configuration of cloud services with extensive assessment tools.

Defend against evolving threats

Protect cloud workloads and apps from threats with the help of leading security research and threat intelligence.

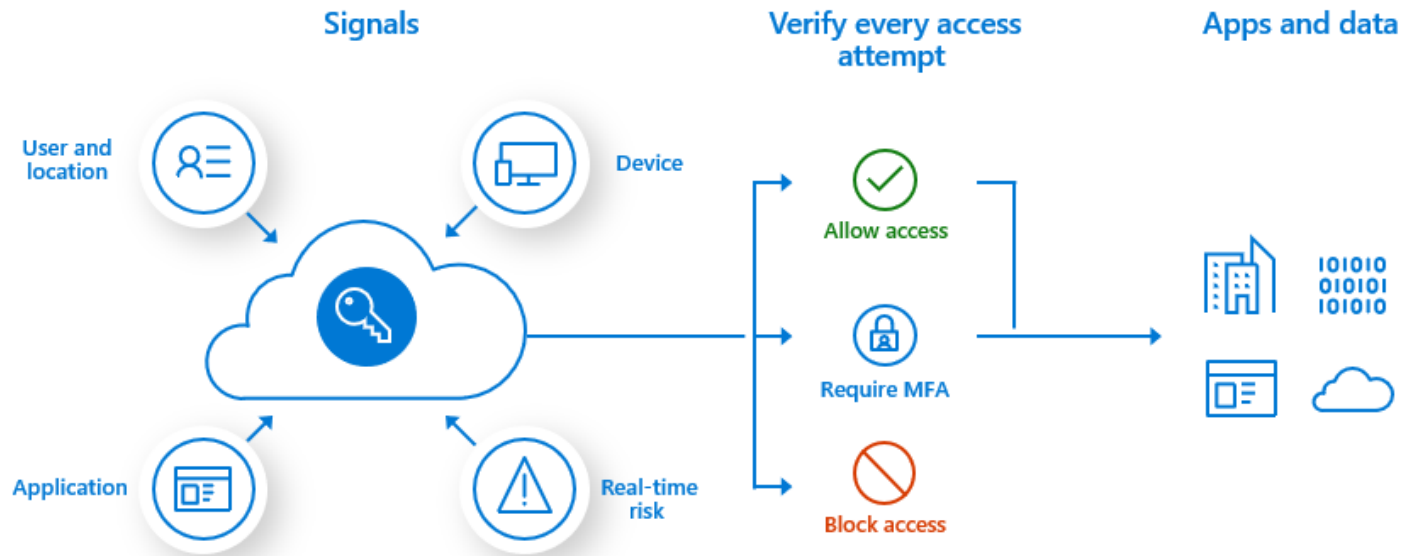

Control access to critical cloud apps and resources

Enforce real-time access controls using built-in risk assessments and contextual information.

Secure every step of the development lifecycle

Safeguard the entire app development, deployment, and operations lifecycle directly within the standard developer workflow.

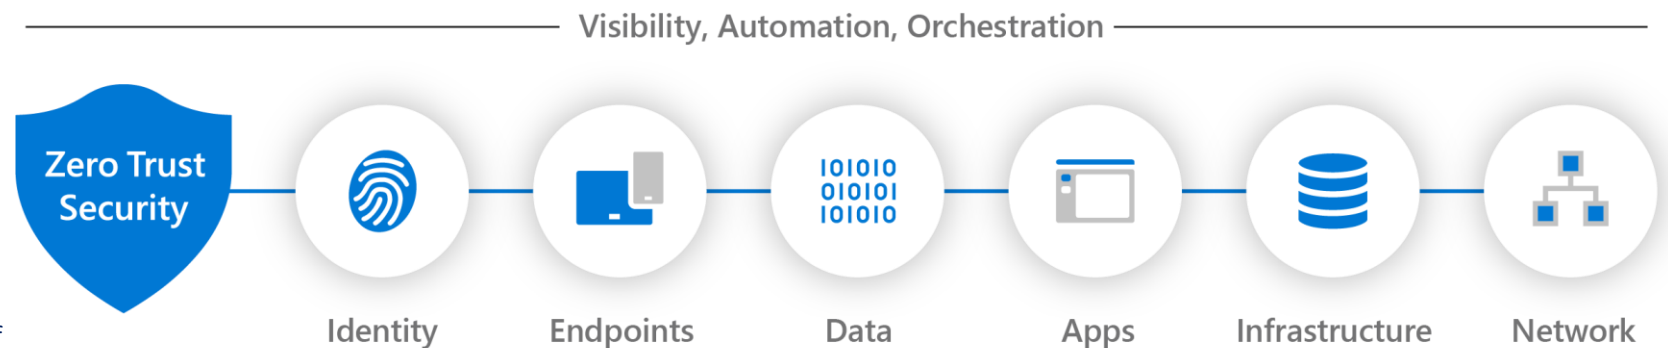

Conditional Access

- Conditional Access is at the heart of the new identity-driven control plane. It spans Microsoft 365 services, including Intune, Microsoft 365, and Windows 10.
- Provides granular access to keep your corporate data secure while allowing users to do their best work from any device and from any location.
- Helps protect sensitive data by evaluating users, devices, apps, location, and assessing the risk before granting access.

Zero Trust Security Model

- Zero Trust teaches us to :
"never trust, always verify."
- Zero trust is a security model based on the principle of maintaining strict access controls and not trusting anyone by default, even those already inside the network perimeter.

How do we really protect?

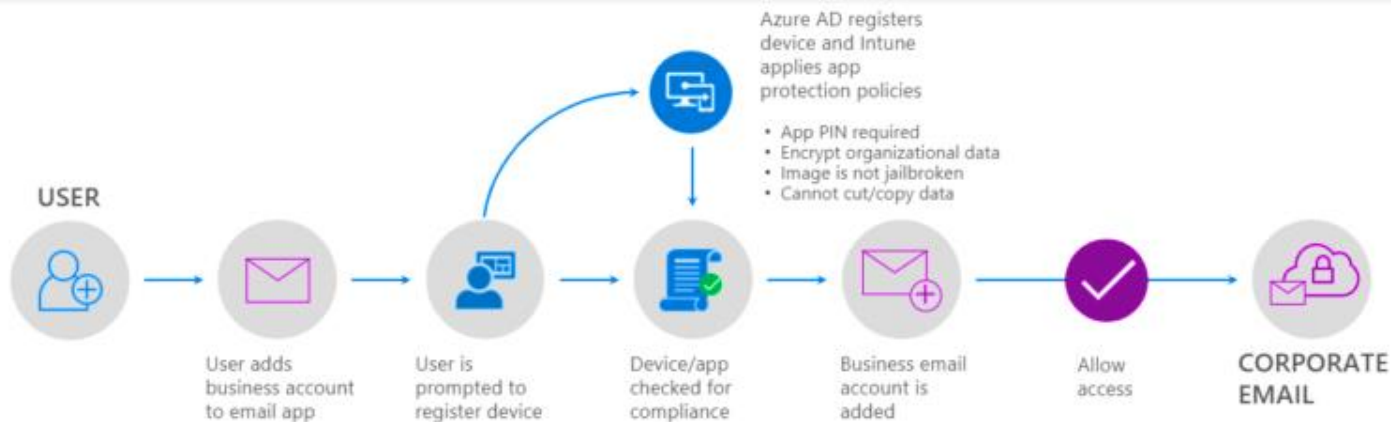

Conditional Access

- Secure who can access and how can they access

App Protection Policies

- We can control what users can do of the data in this applications

I want to secure corporate data on personal devices

THANK YOU!
