

Microsoft Defender for Endpoint

A unified endpoint security platform for prevention, post-breach detection, investigation, and response.

Microsoft Defender for Endpoint is a complete security solution powered by the intelligent cloud that protects endpoints from cyber threats, detects advanced attacks and data breaches, automates security incidents, and improves security posture. It offers a rich set of APIs to build integrated solutions. Security and data privacy are the priorities of the platform.

How Vulcan Cyber integrates with Microsoft Defender for Endpoint to aggregate, analyzes and correlate vulnerability and risk.

Vulcan Cyber aggregates, analyzes and correlates vulnerability and risk data from Defender for Endpoint and dozens of other sources (IT, cloud and application security solutions, including scanners, asset management, collaboration, IT Service Management (ITSM), patch and configuration management) to automatically and intelligently prioritize which vulnerabilities to fix first based on criticality and the greatest impact to security posture. When Vulcan Cyber is integrated with Defender for Endpoint, customers have access to greater vulnerability context to better understand true risk, which vulnerabilities to prioritize, and how to fix them.

Customer Benefits

- Manage the cyber risk lifecycle for application, cloud and infrastructure in one place
- Intelligently analyze and prioritize vulnerabilities based on your organization's risk
- Facilitate communication and collaboration between all departments
- Orchestrate and accelerate risk mitigation with automated playbooks
- Get expert remediation insight for all CVEs with fixes and workarounds
