

TIME TO VALUE

Become data driven and focus on business insights. By utilizing our automation SaaS the average data ingestion effort decreases by over 90 percent and the data modelling and ETL development effort with over 80 percent.

AZURE NATIVE

Accelerate data insights in an Azure native eco-system via our metadata driven data platform automation Service.

AUTOMATION

Metadata driven ETL and data model development, test and deployment. Enabling a truly agile development approach. Generate Data Vault and Kimball data models on the fly. Install them directly in your preferred target environment. Supporting Synapse SQL Pool, Databricks Data Lakehouse and SQL Server on-premises.

PAY-AS-YOU-GO

A data platform is a long term investment. Avoid license lock-ins and the need of non-native Azure products. Pay for the resources you need when you need them.

WADE for Azure

Beyond Data Platform Automation

Our mission is to **keep things simple**. WADE SaaS is built on this principle giving you the capability to focus on data insights instead of costly manual development and maintenance of data pipelines, ETL and data models. WADE SaaS can automate parts or your entire data platform. Giving you the **freedom of choice**.

Data security is key and if your data is not yet approved for the cloud, our hybrid cloud offering allows seamless integration between Azure and your local data center. Catering for Schrems II and any other data legislations.

WADE for Azure is **natively built for the cloud**. Taking the best of breed components from the Microsoft reference architecture and enabling them with added intelligence through a metadata driven REST API. It also includes all the needed automation functionality to orchestrate and develop your data platform.

- The WADE Data Platform Accelerator is an add-on Service to your data platform giving Data Engineers a tool to significantly **reduce time to value**.
- True SaaS - No need for installing third party products or setting up virtual machines. Giving you **full freedom** and a hassle free swift installation and low long term maintenance costs.
- **Easy to learn** metadata driven configuration gives a **smooth deployment** of your data platform. Supports Synapse SQL Pool, Databricks Data Lakehouse and/or SQL Server on-premises with one common process.
- Supports data vault and kimball modelling techniques with **automated build, test and deploy** of your data models.
- Data warehouse virtualization. Enable your data in minutes. Allowing for **rapid prototyping** of your data vault and mart with instant data access.

WADE Insight Background and Benefits

SEAMLESS INTEGRATION

No 3rd party software needed. Minimizing the need of additional skill sets within your maintenance organization. We keep it simple.

HYBRID CLOUD READY

Utilize the power of the cloud while protecting your most sensitive data on-premise via our hybrid data ingestion framework. Seamlessly automate and integrate your data on-premises and in the Azure cloud.

CUSTOMER SUCCESS

Our mission is to minimize your development and maintenance effort. Our WADE professionals are available to support you through your data platform implementation journey. To make it as simple and efficient as possible.

WADE Insight is a SaaS company within the data platform governance, orchestration, and automation space. Our mission is to accelerate data insights and create sustainable business growth.

As a **Microsoft Partner**, we have invested years in allowing our clients to **focus on business insights** before technology. We offer an **Azure cloud native**, non-invasive, **true SaaS** data insight accelerator experience for your Enterprise Data Platform. Ensuring that your data science department is put into hyperdrive.

Rapid **Business insights** are enabled through:

- Cutting development time with over 80% via metadata driven orchestration and data vault and mart data model automation.
- If needed - Manage the most sensitive data on-premises while unleashing the power of Azure via a seamless hybrid cloud experience.
- Machine learning and data science capable
- Direct data access through data warehouse virtualization.
- Pre-built business templates for common data sources.
- REST API based SaaS offering. Pay-as-you-go license model.

System Requirements

- Azure Tenant – Active microsoft data platform reference architecture subscriptions and an active WADE Data Insight Accelerator account.
- WADE Hybrid cloud – On-premises data center with one linux server supporting HDFS. One Windows server supporting Microsoft SQL. One Windows server supporting Microsoft integration runtime.
- Microsoft Excel for metadata management.
