Business Central Power BI Financial Reports

Engaging finance team and wider business to kick-start self-service reporting within Business Central

Modernize analytics and reporting with Power BI

Running financial reports in Business Central can be very time-consuming and manual. The in-built visuals are not necessary providing the detailed view and depth what the users need, and they do not have the flexibility to change them easily.

With pre-build Power BI reports designed for Business Central, Walkerscott assists the finance team (and other stakeholders) in delivering self-service reports quickly and efficiently. The 8-week periods gives appropriate time for user adoption through a structured program and enables to explore the business needs for further engagement.

Accelerate your BI journey with the power of Microsoft's self-service analytics within Business Central

- Pre-built Power BI reports designed for Business Central with the ability to customize them to the company's needs

- Structured program that supports user adoption

- Flexibility to build impactful custom Power BI reports based on business needs
