OK

Power BI Workspaces are experiencing significant change

- IT needs to keep up to enable modern Power BI workspace experiences and capabilities that business requires
- A risk-free path to migration of exiting entities is required by IT or in-house Business Intelligence teams with understanding of implications to Office 365 entities like Sharepoint, Groups, Teams etc.
- Post migration, the ability to review workspaces continuously in an easy manner and to migrate new v1 workspaces is required as well

Modern V2 Power BI workspace experience

- Better access management with Azure AD security groups, distribution list or Office 365 groups
- Ability to control content with new workspace roles
- Shared Datasets and other new features

Structured and continuously governed tenant

- Clean and transparent usage of Power BI Workspaces
- Reusable scripts for continuous visibility on tenant workspaces
- Pre-built Power BI report for analysing workspace situation and history

Power BI PowerShell Cmdlet and REST API expertise

- Reusable scripts for continuous visibility of tenant workspaces
- Latest governance features provided for IT to govern the tenant
- Experience with past migration projects and understanding of office 365 admin implications
