Azure Migration Assessment

Ready to move to Azure? Let's plan your approach.

Whilst migrating your current IT environment into the Cloud can bring many benefits such as increased productivity, better agility and lower costs, getting there can be daunting as cloud migrations are unique and complex.

Wanstor have significant experience helping customers optimise their Azure environment. We have developed a 2 day workshop to scope out what an Azure migration could look like for your business.

A successful migration depends on planning - our workshop is designed to follow Microsoft's best practise Cloud Adoption Framework, ensuring the right infrastructure and workloads are considered for your migration strategy.

“

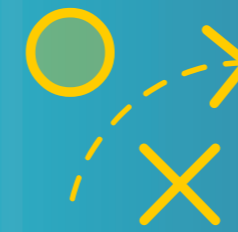

Wanstor have been epic. From implementing massive migrations seamlessly, to the huge improvements in efficiency and functionality. I couldn't have asked for anything more if I'm honest.

Daniel Swithinbank, Catch22

”

Moving to Microsoft Azure Public Cloud

When you partner with Wanstor to move your workloads into Azure, our certified engineers follow Microsoft's Cloud Adoption Framework best practise ensuring that no stone is left unturned, and your deployment will be right first time.

Strategy

Define business case and expected outcomes of adoption

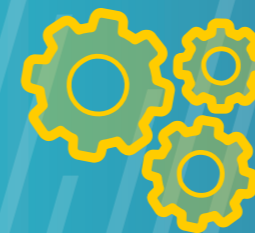

Plan

Align actionable adoption plans to business outcomes

Ready

Prepare the cloud environment for the planned changes

Adopt

Migrate and modernise existing workloads

Manage

Operations management for cloud and hybrid solutions

Govern

Govern the environment and workloads

Azure Migration Workshop

Our three-day assessment is carried out by our team of Azure cloud consultants alongside your business and IT leaders.

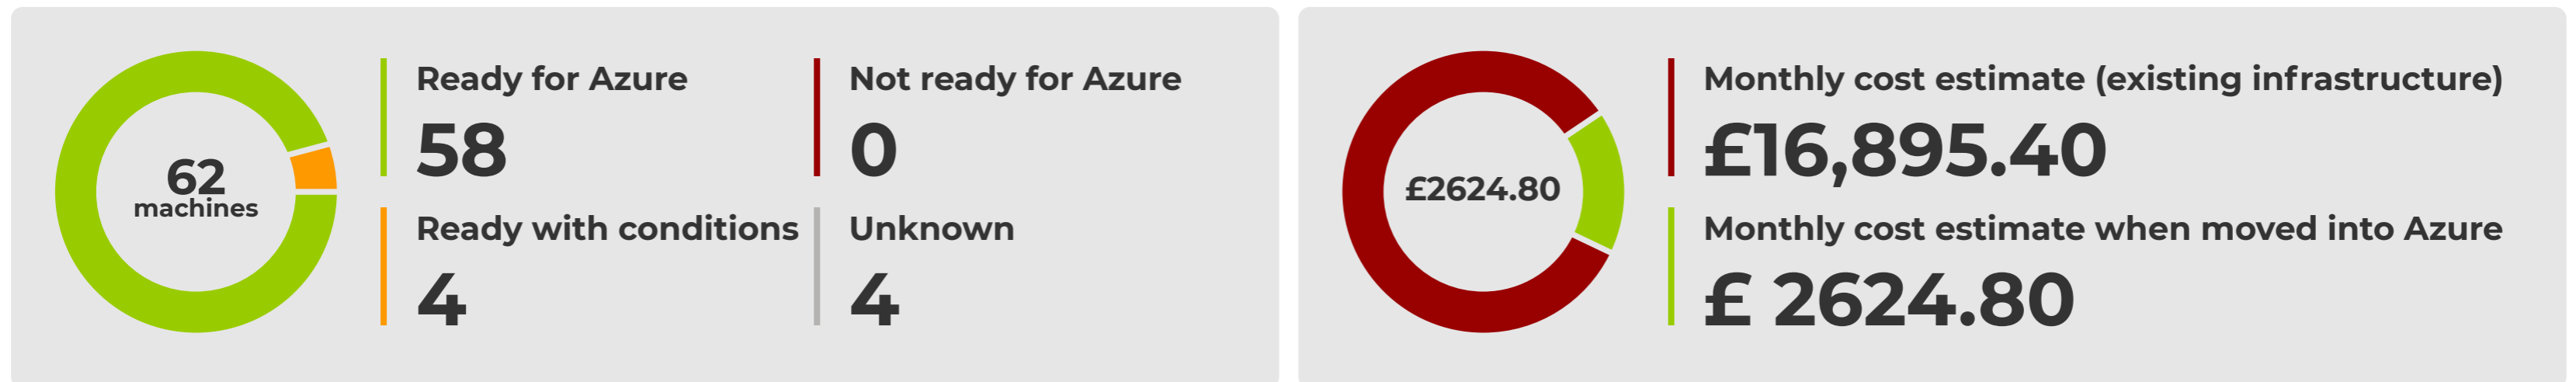

- Day 1** | Onsite or remote workshop to develop business case for migrating to the Cloud and understand key drivers or motivations, concerns, blockers, define expected outcomes
- Day 2** | Undertake a readiness assessment to review current estate and overall business readiness for a cloud migration and adoption
- Day 3** | Discuss our recommended migration strategy including estimated requirements and costs and next steps to begin your journey

The Readiness Assessment

We'll deploy all the necessary tooling into your estate to get a clear picture of your resources.

Total Discovered Servers	Different OS types	Servers with SQL Server	Total Memory	Total vCPU Cores	Total Storage (GB)	Dependency Status	Assessment target location
62 (Includes 8 powered off Servers)	7 (Comprised of 58 Windows, 2 Linux, 2 other)	19	677 GB (589 GB for powered on servers)	210 cores (186 cores for powered on servers)	26914 GB (25264 GB for powered on servers)	47 VMs enabled for dependency mapping, 15 disabled	UK South

We'll then undertake a full analysis of what's ready to migrate, and finally provide a breakdown of different scenarios for migrating and the cost implications of each.

*Costs assume moving into a Reserved Instance Subscription (3 year) performance based with hybrid benefits. Cost-savings of up to 85% can be achieved through migration.

The five steps to a successful migration with Wanstor

**Discovery
workshop**

**Install
tooling**

**Analyse
results**

**Feedback
on findings**

**Provide
strategy report**

Benefits of our Azure Migration Workshop

Using Wanstor as your trusted Azure migration partner can help your business revolutionise your IT infrastructure.

- + **Discover potential cost-savings that can be made through migration**
- + **Easily discover and assess workloads that need to be migrated whilst quickly identifying workloads that can and can't be migrated to Azure**
- + **Provide an estimated monthly cost of running your workloads in Azure**
- + **Identify any specific application and system dependencies**
- + **Receive recommendations on what the size of your Azure environment should be to run as efficiently as possible and remove any guesswork**
- + **Obtain a strategic roadmap for your own Azure migration**

Our Customers

We've worked with many customers to migrate their infrastructure and applications into the Cloud whilst providing ongoing management and support.

The great benefit of working with Wanstor is our direct access to such a large pool of IT specialists within different disciplines giving us exceptional levels of support. The calibre of their technical team is exceptional.

Geoff Wilson, The Fostering Network

Our team has performed many Azure migrations for customers, each one carefully designed to suit their individual business needs, because no two customers are the same. Yet each one has delivered significant performance enhancements and cost savings.

Dustin-Lee Duxbury, Head of Architecture, Wanstor
