Copilot Deployment

Seamless implementation for maximum impact

Organisations across the UK are exploring Copilot deployment to unlock productivity and prove value before full rollout

The **UK Government** recommends a "Scan → Pilot → Scale" approach for AI adoption, emphasising that early pilots are essential for testing viability, building confidence, and measuring impact.

Copilot and GenAI are transforming the way organisations operate, but their real impact depends on empowering people with the knowledge, skills, and confidence to use these tools effectively.

Wanstor's Copilot Deployment service provides a structured pre-pilot for 25 users, enabling organisations to test functionality, gather insights, and prepare for wider implementation.

Why Organisations Should Adopt Copilot:

As organisations move toward AI-driven productivity, adoption is more than a technical rollout—it's about people and processes. Copilot can transform how teams work, but success depends on embedding it into daily workflows and ensuring employees feel confident using it.
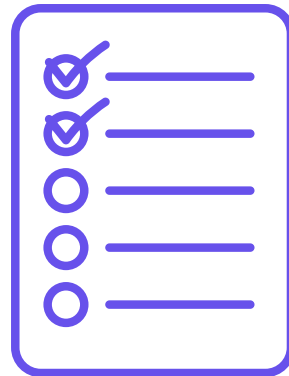

+ **Drive User Engagement**: Build enthusiasm and understanding through structured onboarding.

+ **Smooth Transition**: Reduce disruption with proven change management strategies.

+ **Maximise Value**: Integrate Copilot into core processes for lasting impact.

+ **Empower Teams**: Provide tailored training and support for different roles.

Introducing Our Deployment Service

Successful Copilot adoption starts with a well-structured pre-pilot phase. Wanstor works closely with your organisation to select a diverse group of users, ensuring representation across roles and departments for a complete view of Copilot's impact.

Participants receive hands-on training tailored to their daily tasks, supported by practical resources and ongoing guidance. Throughout the process, feedback is actively gathered to refine the experience and identify opportunities for improvement.

At the end of the pre-pilot, we deliver a detailed analysis of outcomes, including ROI insights and recommendations for wider rollout. This ensures any future deployment is effective, scalable, and aligned with your strategic objectives.

Assessment & Planning
Comprehensive review of current practices and pain points

User Selection
Identify a diverse group of 25 users for the pre-pilot

Training & Enablement
Hands-on sessions and resources tailored to real-world tasks

Feedback & Insights
Collect data and provide recommendations for wider rollout

Our approach

Wanstor takes a collaborative, insight-driven approach to ensure your Copilot deployment delivers real impact.

We begin with a deep dive into your current workflows, identifying pain points and opportunities for improvement. It's a strategic review designed to uncover where Copilot can make the biggest difference.

Next, we work hand-in-hand with key stakeholders through interactive workshops, gathering practical insights into day-to-day challenges and priorities.

This collaborative process ensures every recommendation is tailored to your organisation's unique needs, setting the stage for a successful pre-pilot and beyond.

Our services

Wanstor collaborates with the organisation to identify personnel suitable for the pre-pilot, aiming to involve team members from various departments to observe impact across the organisation.

User Enablement
Deliver training and ongoing support

Impact Analysis
Measure ROI and advise on full rollout

Discovery Workshops
Understand challenges and define objectives

Deployment Design
Create a tailored pre-pilot plan

Why Wanstor

Wanstor brings a proven methodology to Copilot deployment, combining strategic insight with hands-on enablement to ensure real-world impact from day one.

Our approach is rooted in understanding your organisation's unique challenges and tailoring Copilot to meet them, driving adoption, engagement, and measurable outcomes.

From initial assessments and user selection to training, feedback loops, and ROI analysis, Wanstor provides end-to-end support.

We help you build a strong foundation for Copilot success, ensuring your organisation is equipped to scale AI adoption confidently and effectively.

What you'll get

Our Copilot Deployment includes:

+ Pre-pilot deployment for 25 users

+ Tailored training and enablement sessions

+ Continuous feedback and support

+ Post-pilot ROI analysis and rollout recommendations

These insights form the basis for discussions around broader implementation across the business.

The ultimate goal is to ensure that any future roll-out is both effective and aligned with the organisation's strategic objectives.
