Copilot Readiness Assessment

Your roadmap to AI readiness

Organisations across the UK are preparing their digital environments to unlock the full potential of Copilot and AI technologies

According to Gartner, 70% of organisations implementing AI tools will require significant governance and compliance adjustments before full deployment.

Wanstor's Copilot Readiness Assessment ensures your Microsoft 365 environment is secure, compliant, and optimised for Copilot adoption.

We review critical areas such as permissions, data loss prevention, retention policies, and AI security posture to identify risks and create a roadmap for improvement. This proactive approach guarantees that your organisation is ready to deploy Copilot confidently and responsibly.

Why organisations should adopt Copilot:

Before introducing Copilot, it's essential to understand your organisation's readiness. A thorough assessment helps identify gaps and create a clear roadmap for success.

+ **Identify Gaps**: Evaluate infrastructure, licensing, and security posture.

+ **Reduce Risk**: Avoid costly missteps with expert guidance.

+ **Strategic Planning**: Align Copilot adoption with business objectives.

+ **Confidence to Proceed**: Make informed decisions backed by actionable insights.

W

Introducing our Readiness Assessment

Wanstor's proven approach ensures that your organisation remains resilient and prepared for the evolving demands of digital collaboration and artificial intelligence.

Wanstor begins with a deep dive into your current workflows, identifying pain points and opportunities for improvement.

Upon completion of the readiness assessment, Wanstor will supply a comprehensive report outlining all findings, recommended actions, and strategic next steps.

This report will serve as a valuable resource, guiding your organisation in the continuous improvement of security, compliance, and operational excellence within the Microsoft 365 and Copilot ecosystem.

What we'll do:

We'll complete a strategic review designed to uncover where Copilot can make the biggest difference.
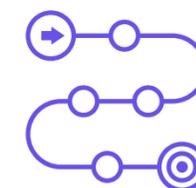

Environment Analysis: Deep dive into Microsoft 365 configuration and security posture

Risk Identification: Highlight vulnerabilities in permissions, policies, and AI integrations

Governance Framework: Implement robust compliance and data protection measures

Roadmap Delivery: Provide actionable recommendations for readiness and optimisation

Our approach

Wanstor will undertake a comprehensive Copilot readiness assessment, tailored to your organisation's specific environment.

The assessment encompasses all critical aspects of Microsoft 365, with particular attention to the following areas:

Area	Description	Recommendation
SharePoint Permissions	A meticulous review of SharePoint permissions will be carried out to identify instances of excessive data sharing or potential overexposure.	Remediate identified risks and ensure that only authorised users have access to sensitive information.
Microsoft Data Loss Prevention (DLP)	Assess DLP policy configurations to verify that effective controls exist to prevent unauthorised access, accidental sharing, or loss of critical data.	Policy adjustments and enhancements to strengthen data protection across Microsoft 365.
Retention Configuration	Evaluate retention policies to ensure compliance and accurate Copilot outputs and identify dark data within your environment.	Optimisation of retention settings and removal of dark data to improve efficiency and reduce storage costs.
Data Security Posture Management for AI	Deploy advanced solutions to evaluate your organisation's data security posture in relation to artificial intelligence. This includes assessing the integration and usage of third-party AI applications.	Actionable measures to mitigate risks, enforce governance, and protect sensitive data from external exposure.

Why Wanstor

Wanstor's **proven approach ensures that your organisation remains resilient and prepared for the evolving demands of digital collaboration and artificial intelligence.**

With decades of experience in delivering secure and compliant Microsoft 365 environments, Wanstor ensures your organisation is fully prepared for Copilot adoption.

Our readiness assessment goes beyond technical checks; we focus on governance, data protection, and operational excellence to create a resilient foundation for AI-driven productivity.

Get in touch

From permissions audits and policy reviews to AI security posture analysis and tailored roadmaps, Wanstor provides end-to-end support.

We help you mitigate risks, strengthen compliance, and optimise your environment so you can deploy Copilot confidently and effectively.

+ Proven Expertise in Microsoft 365 governance and AI security

+ Comprehensive Methodology for risk mitigation and compliance

+ Long-Term Partnership for continuous improvement and resilience

+ Tailored Roadmaps aligned with your business objectives
