Azure Security Assessment

The adoption of cloud services worldwide continues to accelerate, yet many organisations are wary of trusting third parties with their data, applications and infrastructure.
Microsoft Azure enables organisations to build secure solutions in the cloud, managing identities, protecting critical assets and responding to advanced threats.

It is essential however that Azure security features are in place and configured in line with best practices protecting the organisation from risks. Our Azure Security Assessments are delivered by senior security consultants, expert in Microsoft Cloud and security technologies
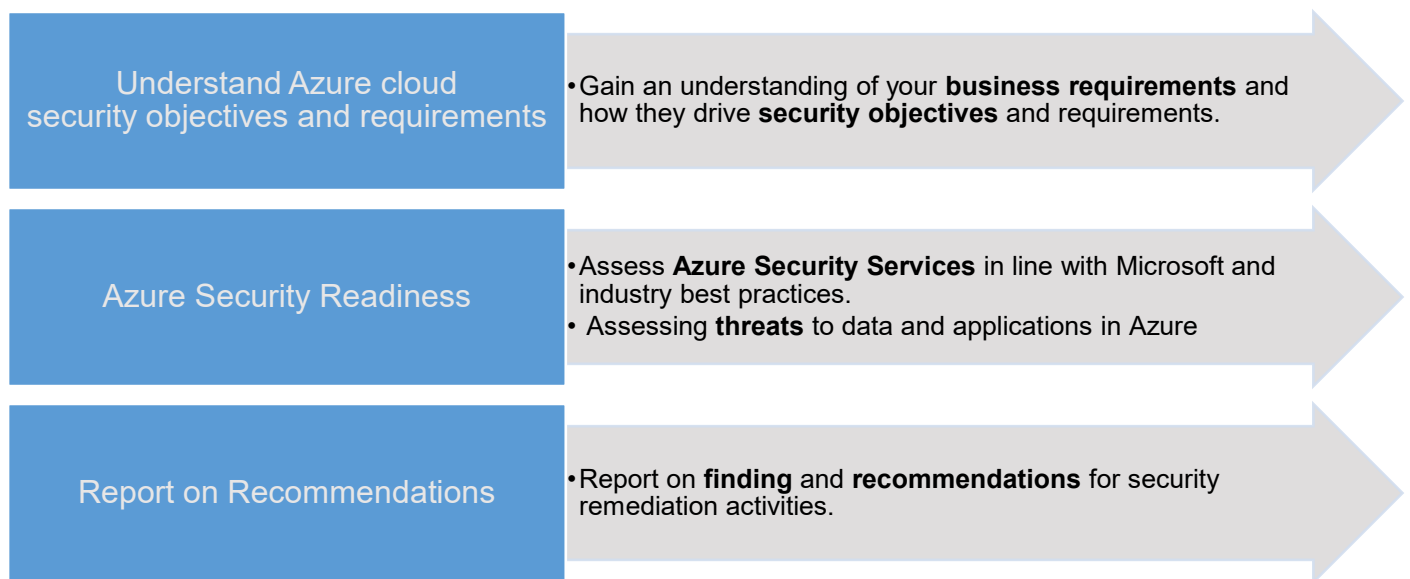

Azure Security Assessment

The adoption of cloud services worldwide continues to accelerate, yet many organisations are wary of trusting third parties with their data, applications and infrastructure. Microsoft Azure enables organisations to build secure solutions in the cloud, managing identities, protecting critical assets and responding to advanced threats.

It is essential however that Azure security features are in place and configured in line with best practices protecting the organisation from risks.

Ward Solutions' Security Assessments are delivered by senior security consultants, expert in Microsoft Cloud and security technologies, who adopt a risk based approach ensuring that strategic business objectives are delivered in a secure manner.

Objectives and Approach

Understand Azure cloud security objectives and requirements	• Gain an understanding of your **business requirements** and how they drive **security objectives** and requirements.
Azure Security Readiness	• Assess **Azure Security Services** in line with Microsoft and industry best practices. • Assessing **threats** to data and applications in Azure
Report on Recommendations	• Report on **finding** and **recommendations** for security remediation activities.
