AGILE ENDPOINT MANAGEMENT

Modernize Your SCCM Processes with WBM's Endpoint Management as a Service

Improve the way your organization approaches device configuration, management, and support with a solution that integrates your Configuration Manager with Office 365 cloud technology.

What Is Endpoint Management as a Service (EMaaS)?

The rapid shift to remote work has left many IT departments feeling strained. Configuring and managing all of your organization's devices in this environment is no easy task. Combine all the functionality of the cloud with your existing Configuration Management solutions with a service that streamlines device provisioning, compliance, and visibility, remote accessibility, device visibility, and more. EMaaS gives your organization a powerful tool that lets you drive even more value out of your existing IT investments, while adopting the flexible and agile capabilities of the cloud.

Implement an Agile Approach to Platform Modernization With WBM

SOLVE WEAKNESSES AND CREATE STRENGTHS ACROSS YOUR ORGANIZATION – WBM examines the tools you use and how you use them to determine the best avenue for organization-wide implementation.

MAINTAIN SECURITY REQUIREMENTS – Ensure that your company is meeting internal and external security compliance requirements for the devices you rely on. Modify access requirements, set conditional access, and more.

IMPROVE IT WORKFLOWS ACROSS CHANNELS – Give your IT teams a powerful tool to control all aspects of endpoint management, whether they're leveraging an existing Configuration Manager, Intune, or Microsoft Endpoint Manager.

MONITOR DEVICE HEALTH – Stay on top of device lifecycle management with enhanced capabilities that lets you link users, monitor device health, and apps using Azure Active Directory.

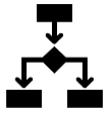

EXPAND YOUR REMOTE CAPABILITIES – Embrace the shift to remote work with full remote control capabilities. Quickly restart, factory reset, and take control of any device managed through EMaaS.

SAFELY TEST NEW WORKLOADS – Test new endpoint management workloads in an isolated environment. Explore Intune functionality with test groups that you can expand to larger groups when ready.

SCALE CONFIGURATION MANAGEMENT ON DEMAND – Grow your business without worrying about scaling challenges. EMaaS gives your organization the flexibility to keep up with your growing endpoint management needs.

OUR SERVICES

CONFIGURATION MANAGER ASSESSMENT

Let our endpoint management specialists assess your current systems. This service works to identify key weaknesses in your existing Configuration Manager installation and processes.

NEW SCCM/MECM INSTALLATION

New SCCM/MECM installations ensure that your systems and teams are ready to fully embrace a modern co-management solution.

CLOUD INTEGRATION FOR YOUR SCCM & AZURE

Transform the capabilities of your existing SCCM by integrating it with Azure. Unlock the full potential of Intune, deploy a Cloud Management Gateway, and simplify your approach.

APPLICATION-DATABASE SERVER INSTALL/UPGRADE

We ensure your application-database server is capable of supporting any new environments, including image building required for deployment.

DATA & DEVICE MIGRATION

We handle all data and device migrations to the new SCCM site. This includes all collections and objects and clients stored on your existing SCCM solution.
