# Tomorrow's change begins today...

The first Indigenous developed software to **capture, track, manage and share your Reconciliation journey**, as well as help you understand the Impact of your contributions against your strategic priorities and your reconciliation vision!

Created by Australia's leading **Indigenous software company**, LOGiT Australia, so even **using weavr contributes towards your Reconciliation outcomes**.

Insights:
Targeted, live and accurate dashboard reports

Convenience:
'Single source of truth' for your Strategy

Streamlined:
Scheduled progress updates accessed online

weavr.
More than a Management System, it's a Community for Change

Impacts:
Measure the Impacts of your Contributions towards Closing the Gap

Celebrate:
Build your own Songline of milestone moments for every Strategy

weavr by LOGiT Australia

It's more than a system

Subscribers to **weavr** also have access to:

Key Reconciliation Resources   that directly provide assistance on several deliverables

Training & Workshops   to develop strategies that clearly align to the objectives of the organisation

Customer Success   to support you in your journey and answer any of your questions
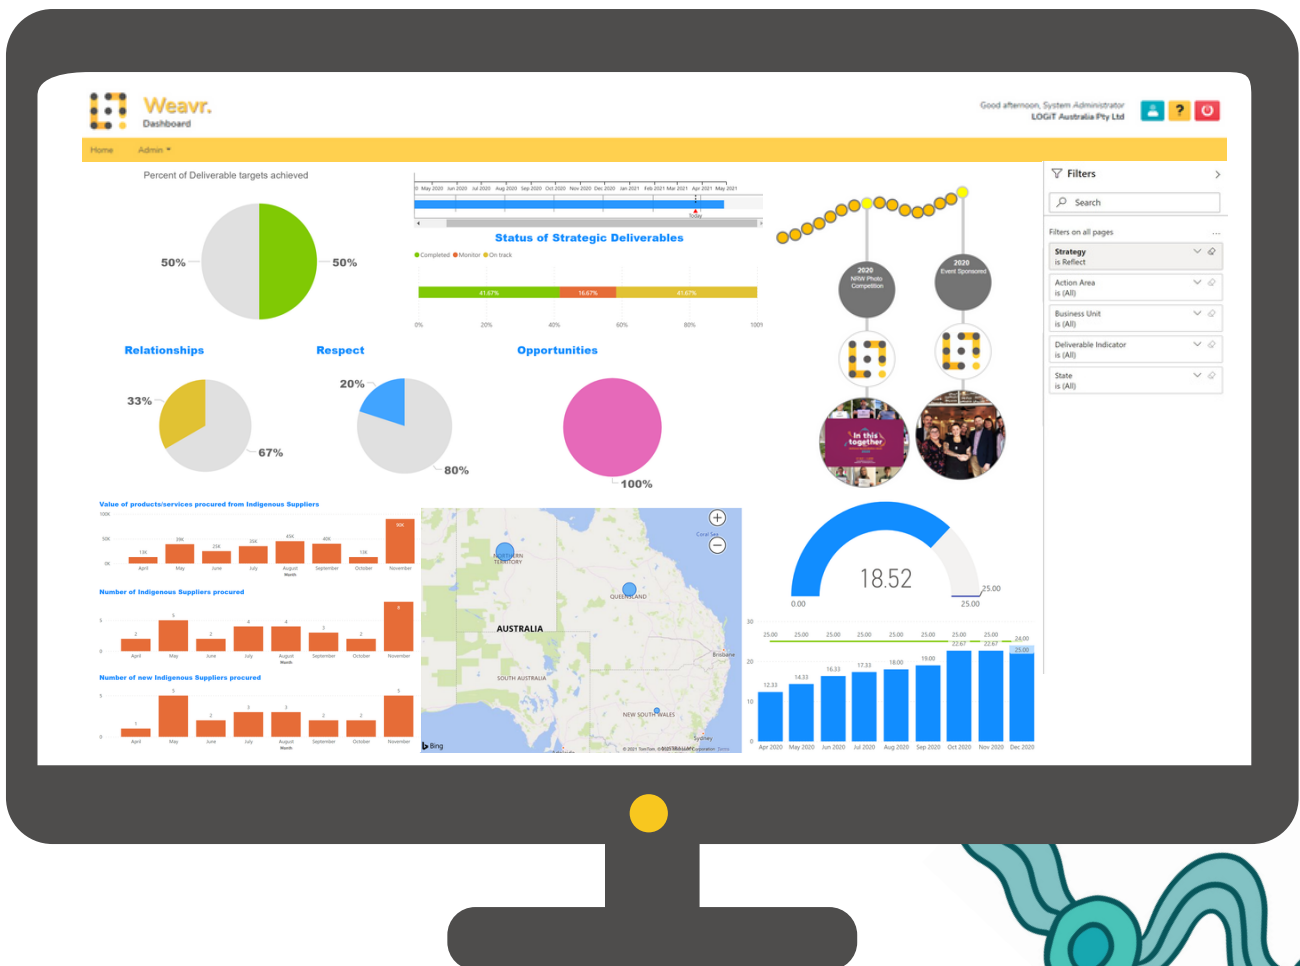

weavr Community   to interact, seek and provide advice from all weavr users as group of peers growing together

The new standard in Reconciliation Reporting

Featuring:

- Strategy Snapshots
- Target Timelines
- Community impact overview
- Geographical Analysis
- Songline Milestones
- Project Management

Contact us to learn how you can be part of a **community for change** - a paradigm shift in how businesses influence positive social change in Australia.

Why weavr

Have a **live version** of your First Nations Strategy - rather than a pretty report gathering dust on a coffee table at reception

Plan the implementation of your Strategy to ensure activities are **scheduled** and **results are recorded** when due

Delegate and collaborate in the implementation of your Strategy - Reconciliation needs to be experienced by everyone in the organisation, not just the Reconciliation Manager

Access visually engaging reports that provide visibility of your journey as you progress through your Strategy (proactive) - allowing for **learnings** and adjustments when required, and to **celebrate** when milestones are achieved.

Access data to ensure you are **complying** with governing bodies requirements and report to them

Have weavr **walk with you** throughout your Strategy, as you transition to making Reconciliation a Core Area of your business rather than feel good thing

Have your team **experience and learn** more about your Strategy, it's importance and their role in a **culturally engaging** way

Gather **quantitative**, and more important, **qualitative** data to understand how Indigenous Culture is being embedded in your organisation's culture

The Innovating Partners

ADVANCE QUEENSLAND

CSIRO

MEGT

Weavr was developed as a collaborative project with

CSIRO
Advance Queensland Deadly Innovation Strategy
MEGT Australia

to increase productivity, data accuracy, collaboration, visibility of achievements and the impacts these have on Indigenous communities.
The LOGiT team harnessed the vision the Innovating Partners had and turned it into a technology solution.

Why LOGiT

LOGiT is an Indigenous business, based in Brisbane, specialising in the development of commercial software applications to improve productivity and support better decision making capabilities.
LOGiT is the first Indigenous software company developing custom and off-the-shelf Business Solutions.

LOGiT walks the talk

Supply Nation Certified Indigenous Business

Femeconomy Certified Female Business

Social Enterprise Certified Business

Sponsors of the **Souths Inala** and the **Ipswich Swifts** Rugby Clubs. Both are Indigenous community football teams providing opportunities to Indigenous people of all ages to engage and support each other.

Sponsors the first **Indigenous Scholarship in Asset Management** in partnership with IPWEA – which now will be run twice per year

Tech Specs

✓ User Access Control

You have the control over who can access your data. You can add as many uses within your organisation to collaborate on your data. Within the user types, the System Administrator has access to all data and functionality. The System Administrator manages users and can customise access type delegated for each user.

✓ Multi-Factor (2FA) Authentication

Logging into weavr. requires just your organisation's emails and password. With two-factor authentication (2FA), logging in requires verification using a second device, such as your mobile phone. Because logging in with 2FA requires that you have access to a physical device, the risk of a potential intruder gaining access to your account is much lower.

✓ Single Sign-On (SSO) Authentication

Logging into weavr can be enable using Single sign-on (SSO) to give your team members one account for all of the systems your business uses. This can be discussed and workshopped during project Implementation.

✓ Data Encryption

Weavr data is hosted on Azure SQL Database. Encryption at rest occurs via the Transparent Data Encryption (TDE). Encryption in transit occurs via Secure Sockets Layer and Transport Layer Security (SSL/TLS) at all times for all connections.

✓ Data Centres

Weavr database is currently hosted in Microsoft Azure data centres located in Australia East. Microsoft secures your data using multiple layers of security and encryption protocols. All Azure services can be used in compliance with the GDPR.

✓ Monitoring

The team has relevant threat detection, logging and alerting systems. All procedures are aligned with relevant Incident Response and Business Continuity policies. Weavr procedures are in alignment with ISO27001 recommendations.

✓ Availability

weavr has back up and redundancy procedures in place, so that if the if an unlikely event occurs, your services have minimum if any disruption.

✓ API Integrations

There is the ability to have APIs, which are designed to enable teams to build robust integrations that help them customize and get the most value out of weavr.

Pricing

Pricing is Subscription (SaaS) based on the number of users.
