

# Injio Intranet

Modern Digital Workplace.

Structured, Branded, Built on Microsoft 365

**Injio** is a scalable SharePoint intranet accelerator that transforms Microsoft 365 into a unified communication, collaboration and engagement platform.

Delivered in weeks. Designed for long-term evolution.

# The Digital Workplace Gap in Microsoft 365

**Microsoft 365 enables collaboration.**

**It does not automatically deliver a structured, engaging intranet experience.**

Most organisations already use:

- SharePoint Online
- Microsoft Teams
- OneDrive
- Outlook
- Microsoft 365 Copilot

But what's often missing is:

- Clear information architecture
- Structured navigation
- Consistent branding
- Effective search and discovery
- Centralised communications
- A unified digital front door

## The Result

Information exists - but it's fragmented.

Communication happens - but it's inconsistent.

Search works - but trust is low.

AI is available - but content structure limits value.

Microsoft 365 provides the tools.

It does not provide the experience by default.

# Why a Modern Intranet Matters Now

## Hybrid Work Has Fragmented Information

- Content lives in Teams, email, SharePoint and OneDrive
- Navigation is inconsistent
- New starters struggle to find what matters
- Institutional knowledge becomes siloed

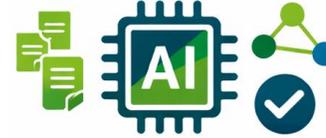

Collaboration has increased. Clarity has not.

## Communication Competes for Attention

- Email overload
- Notification fatigue
- Distributed teams
- Low intranet engagement

If it's not structured and targeted, it's ignored.

## AI Changes the Equation

Microsoft 365 Copilot surfaces what exists.

If content is fragmented or poorly structured, AI amplifies the problem.

## The Shift

A modern intranet is no longer optional.

It is the structured digital front door to Microsoft 365.

# What a Modern Intranet Requires

**A modern intranet is not a homepage.  
It is structured digital workplace architecture embedded in Microsoft 365.**

## Clear Information Architecture

- Defined site structure and ownership
- Logical navigation and hub design
- Consistent content patterns
- Metadata-driven organisation

Without structure, scale creates confusion.

## Engaging, Targeted Communication

- Dynamic news and announcements
- Audience targeting
- Visual consistency and branding
- Clear call-to-action patterns

Communication must compete for attention.

## Intelligent Search & Discovery

- Optimised Microsoft Search
- Structured taxonomy
- Content roll-ups and aggregation
- Reduced duplication

Findability drives adoption.

## The Shift

- Defined content ownership
- Lifecycle expectations
- Scalable design framework
- Alignment with Microsoft 365 roadmap

An intranet must evolve - not stagnate.

**Modern intranets require structure, not just design.**

## Introducing Injio

### Structured Intranet Architecture Built on Microsoft 365

Injio transforms SharePoint Online into a modern, scalable digital workplace experience.

It embeds structured information architecture, branded design patterns and governance foundations directly into your Microsoft 365 tenant - without introducing a new platform.

#### What Injio Enables

- Clear, scalable site and hub structure
- Consistent navigation and branded experience
- Configurable, reusable web parts
- Audience-targeted communications
- An engaging & branded experience
- Search optimisation aligned to Microsoft 365

Structure is built in - not layered on later.

#### The Outcome

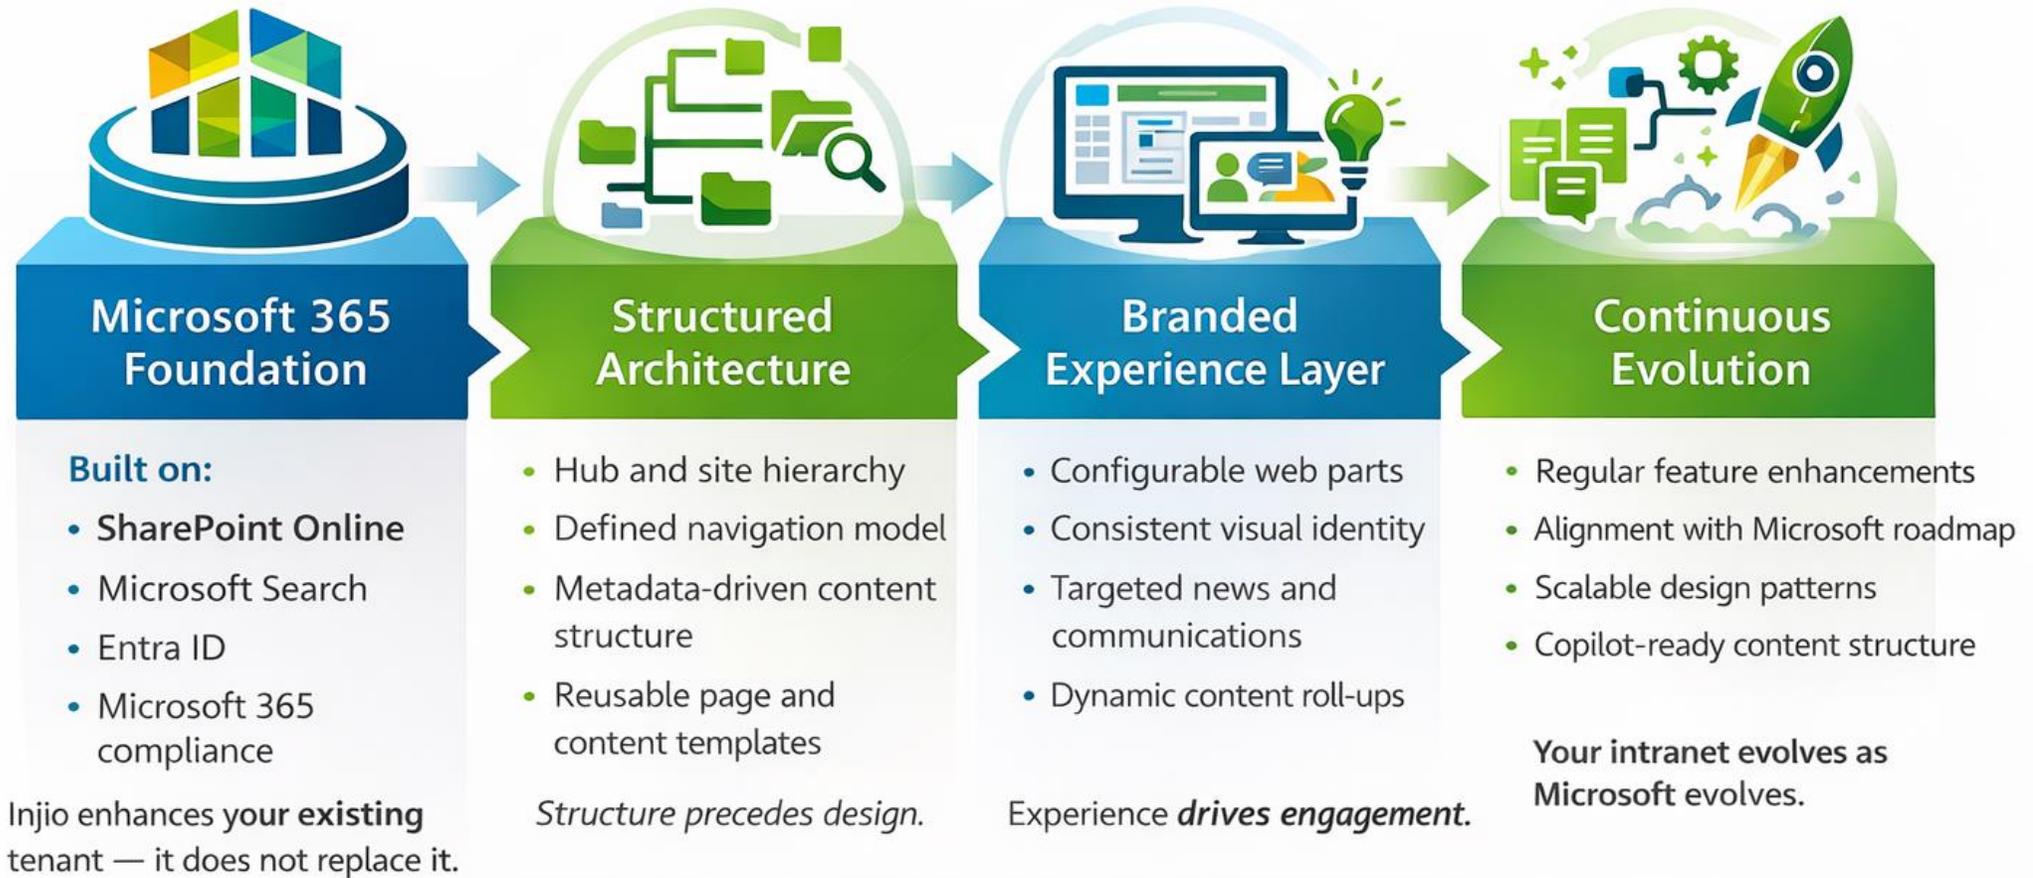

Organisations gain:

- A unified digital front door
- Improved communication visibility
- Increased adoption of Microsoft 365
- Stronger content discoverability
- A foundation ready for Copilot and AI

Injio operationalises the modern intranet - Building on Microsoft 365.

# How Injio Works

From Platform to Digital Workplace

Platform → Structure → Experience → Evolution

That is the Injio model.

# Driving Adoption & Engagement

- Structured experience design
- Audience-targeted delivery
- Dynamic content aggregation
- Multi-dimensional navigation
- Effective search
- Personalisation and audience targeting
- Gateway for app integration
- Engaging content presentation options
- Analysis and insights drive usage
- Granular Branding and multi-site options
- Multiple Access points

# Productivity & Knowledge Flow

Information should accelerate work, not create friction.

Injio enables:

- Central access to policies, procedures and resources
- Structured knowledge sharing across departments
- Integrated access to key business systems
- Surfacing of critical information for decision-making
- Support for automation and self-service

**The Injio intranet  
becomes a  
productivity  
platform.**

# Security, Governance & Platform Alignment

A modern intranet must strengthen your Microsoft 365 environment.

Injio provides:

- Native SharePoint Online architecture
- Alignment with Microsoft security and compliance
- Global permissions model
- Single sign-on integration
- Full data sovereignty within your tenant

Enhancement without additional platform risk.

# Injio Platform: What's included?

## Core Intranet Experience

- Modern, responsive SharePoint intranet framework
- Configurable homepage & landing page layouts
- Page templates & flexible layout system
- Mega Menu & navigation components
- Mobile-friendly, accessible design system
- Consistent branding & theming across sites

## Content & Communications

- News (standard & featured)
- News Ticker
- Announcements
- Events Calendar
- Image Gallery
- Image Carousel
- Video Gallery
- Employee Spotlight
- Staff / People Directory
- Welcome Web Part
- Page Navigation Menu (in-page)

## Engagement & Social

- Social Tab (likes, comments, engagement)
- Polls
- Suggestions / ideas module
- Employee Recognition
- Classifieds
- Employment Opportunities
- Magic Contacts
- Staff Directory (advanced profiles)

## Productivity & Quick Access

- Tiles (icon-based navigation)
- Magic Links
- Magic Documents
- Services Directory (configurable, searchable)
- A-Z indexes with empty-state awareness
- Maps (locations, offices, sites)

## Platform & Extensibility

- Built on SharePoint Online
- SPFx-based web parts
- Centralised Injio configuration management
- Modern SPFx toolchain (HEFT / SPFx 1.25+)
- Designed to work with Microsoft 365 & Copilot ecosystem

## Search & Findability

- Injio Search (enhanced SharePoint search experience)
- Search Centre
- Web Part Refiner
- Curated & popular searches
- Semantic Search Lite (Next Gen – no Copilot dependency)  
(metadata & title-based semantic matching, no index required)

## Content Quality, Trust & Governance

- Read & Acknowledge (policy confirmation & compliance)
- Read & Acknowledge UI refresh (Next Gen)
- Page Quality Assessment Tool (Next Gen)
- Page Readiness / Quality Dashboard (Next Gen)
- Content Trust Dashboard – initial release (Next Gen)
- Metadata & content gap analysis (Next Gen – roadmap)

# Why Injio

## A Structured, Lower-Risk Approach to Modern Intranet Delivery

### Proven, Not Experimental

- Refined over 10+ years of enterprise deployments
- Tested across regulated and complex environments
- Built on modern SharePoint architecture

This is not a custom build from scratch.

### Accelerated Delivery

- Deployment in weeks, not months
- Reusable design patterns and web parts
- Reduced implementation risk

Time to value matters.

### Lower Total Cost of Ownership

- No custom code dependency
- No external hosting platform
- No duplicate security model

You invest in Microsoft 365 - not another system.

### Continuous Evolution

- Regular feature enhancements
- Alignment with Microsoft roadmap
- Designed to evolve alongside Copilot and Search

Your intranet remains current without rebuild cycles.

# Ready to Modernise Your Digital Workplace?

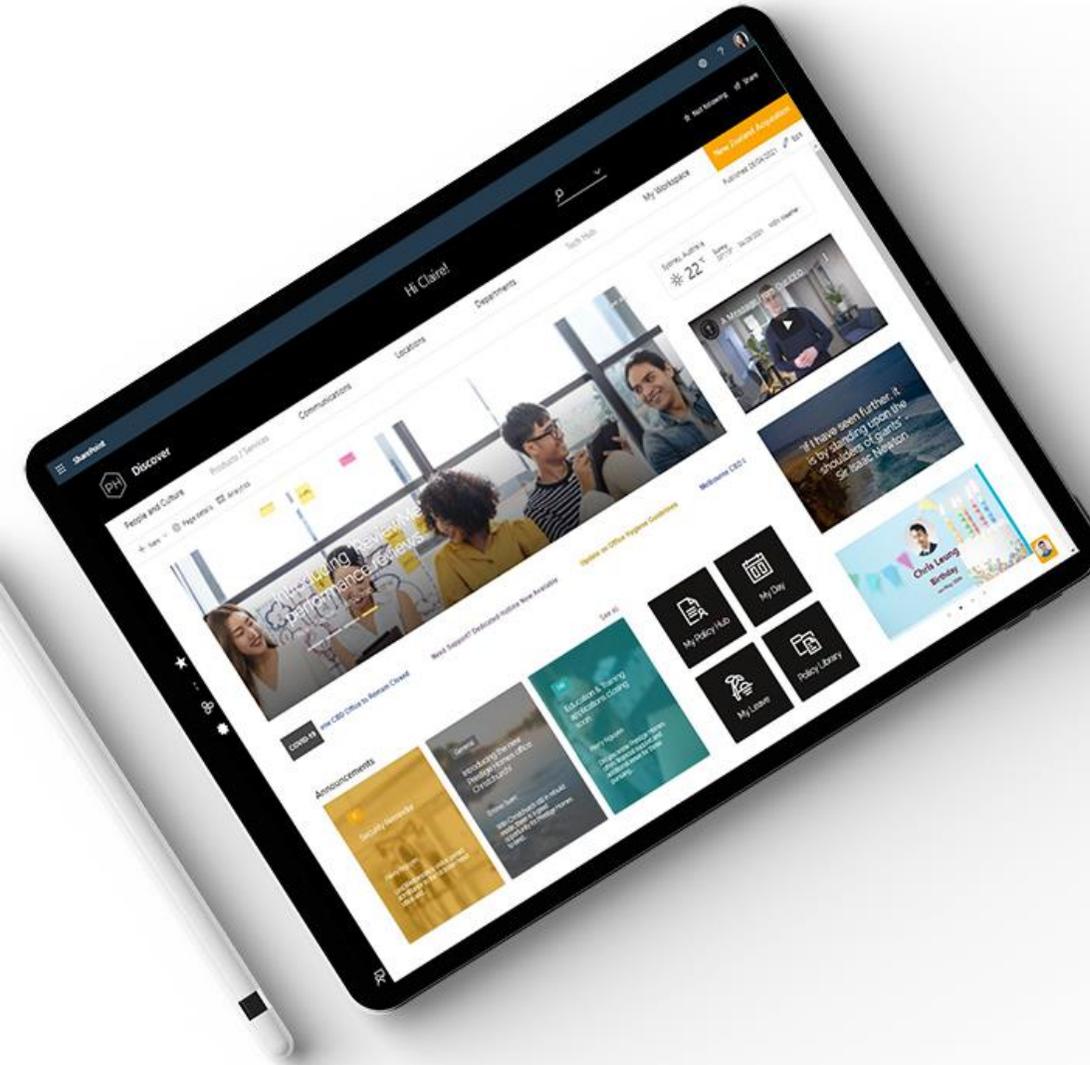

## Book a Live Demo

See **Injio** in action.

In a 30-minute tailored session, we will:

- Walk through real intranet examples
- Show structured hub architecture
- Demonstrate dynamic content and targeting
- Explore Copilot readiness alignment
- Discuss deployment timelines

No obligation. Practical and focused. [Injio.com](https://www.injio.com)
