

# Intranet Health Check

Keep your intranet secure, reliable, & ready for what's next

## Service Overview

A detailed assessment of your WebVine's Injio or SharePoint Online intranet - covering both technical and functional aspects - to ensure it continues to perform smoothly, securely, and in line with Microsoft 365 updates and is optimized for Microsoft 365 Copilot.

## Why It's Important

Your intranet underpins daily communication and collaboration. If performance lags, permissions are misaligned, or features fall behind the Microsoft 365 roadmap, the result can be frustration, security risks, and wasted effort. A proactive health check helps avoid issues before they disrupt your people.

## What's Included

- Review of configuration, permissions, and integrations
- Performance and security testing
- Assessment against Microsoft 365 and industry best practices
- Practical recommendations for optimisation and upgrades
- A broken links report to highlight content issues

## What You'll Gain

- A faster, more reliable intranet experience for employees
- Reduced security and compliance risks
- Confidence that your intranet is aligned with the Microsoft 365 roadmap and ready for Microsoft 365 Copilot
- Clear next steps for keeping your intranet healthy long term

## Next Steps

Select how you'd like to begin:

- Start with a focused security and performance check
- Request a broken links report to quickly highlight potential risks
- Or schedule the full health check for a complete review

**Duration:** 2-3 weeks

**Investment:** \$9,000 ex GST
