The queue management solution assists in the registration and routing of patients in the hospital.

Hospital staff assist in the registration of patients and these patients are routed into their purpose of visit in the hospital such as the paediatric unit demonstrated in this solution and from there the patient can either be sent to the pharmacy for medicine collection or sent to be checked out on one of the kiosks is the facility.

1.2 Presentation Summary

The patient will be registered by **Thembi Moloi**, who is responsible for all patient registrations in the front desk then the patient will be routed to the paediatric unit and **Lesego Motaung** will be responsible for checking in the patient and route them to **Thapelo Cloete** to check them out on the kiosk provided.

- Login on the Java Client as **t.moloi** (**Front Desk**),
- Login on the Workflow Client as **l.motaung** (Paediatrician),
- Then lastly use the Web Client as **t.cloete** (**Queue admin**).

1.3 Register patient.

Login on the Java Client as **t.moloi** and password **elo.**

- The first input filed denotes the read-only values of the current time and date which is essentially the arrival time,
- Select the purpose of the visit in the keyword list provided e.g., P Paediatrician,
- The personal information area requires the capturer to select the patient identifier and the required fields will be invoked such as selecting the SA ID Holder will require a valid SA ID,
- Provide the first and last name, phone number and optionally provide the email address.
- In the contact management checkbox, check the **create new patient contact** to create the patient in the patient list/ database.
- Capture the biometrics or the patient picture with the aid of the webcam hosted in the kiosk.
- Once all the fields are captured click **OK** to register the patient.

The newly created patient will be visible in the tree hierarchy and the information is previewed together with the automated feed on the left-hand-side.

1.4 Print patient badge

After registration, the patient then receives a printed-out patient token which will consist of all their details, and they can use it for the rest of their visit on that specific day.

• In the patient tab on the navigation bar, click the **Create patient badge** function to create a new patient badge.

1.5 Check-in Patient

Once the patient has been routed to the consultation unit they are visiting, they are placed on an automated queue.

• Login to the ELO workflow client with **l.motaung** (**Paediatrician**), the tickets are sorted according to their time of arrival. Lesego will need to accept the ticket and then assist the patient.

After accepting the ticket, the doctor assisted the patient they will need to pass the ticket to the queue admin to proceed with the checkout at the provided kiosk.

When the ticket has been passed forward the next ticket is pushed forward to the queue.

1.6 Checking out the patient

Login as **t.cloete** on the Web client to assist users in being checked out, the web client will be hosted on the kiosks.

Navigate to the ticket displayed in the preview area, click the checkout patient button and the patient is checked out successfully and with ease.
