

Digitizing the built world for a better world.

Saving money and saving the planet are no longer mutually exclusive. We make your buildings work smarter for you, your business and the environment.

The built world.

The built world — its structures and infrastructures, its utility and usability — is at a tipping point. The choices we make in designing, constructing, and managing this environment have far-reaching consequences.

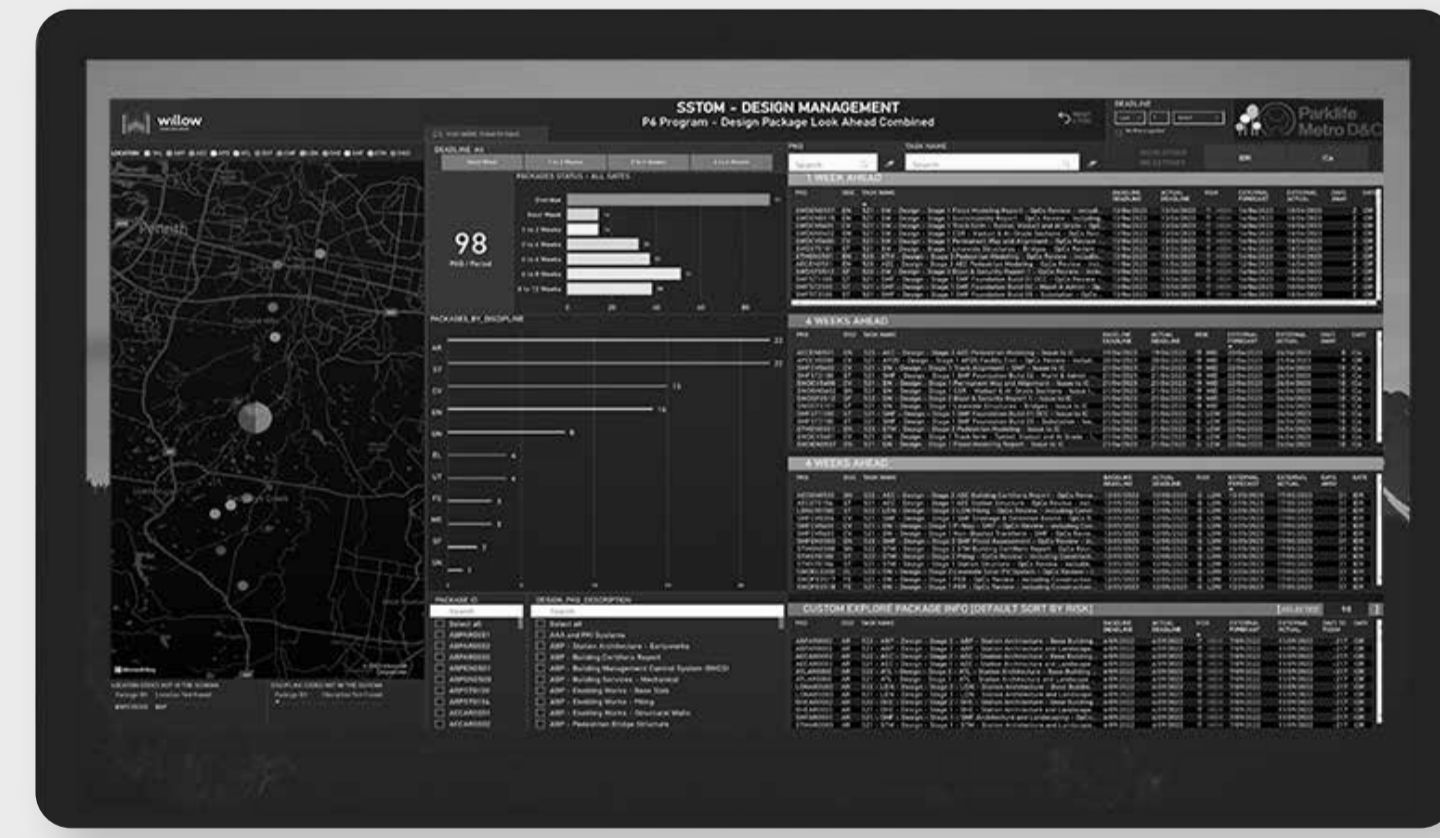

Willow activates the ability of the built world to operate more securely, sustainably and efficiently. From optimizing construction processes to enhancing urban planning, we enable clients to understand, respond to, and anticipate complex conditions – in real time and over time – on one integrated platform.

Through the integration of static, spatial and live data, Willow visualizes and interprets the relationships between equipment and systems to better inform action. Sustainability imperatives are urgent. Efficiencies are economically and environmentally critical. And safety has taken on new dimensions, with threats from both cyber and climate.

What makes Willow unique?

We provide you with the oversight, insight and foresight to achieve your goals.

At Willow we know data and people work hand in hand. With our unique technology you can upskill your people, buildings and facilities.

Collecting data is smart.

Willow Activate Technology starts by breaking down silos to connect the dots among diverse data sources, both live and historical, within a unique, centralized Knowledge Graph. Here, that data on the performance of individual assets, an entire building, or even a portfolio of buildings are received and processed in the moment, allowing for immediate insights and adjustments. This live data is constantly updating to reflect real-world conditions and dynamics. But that's just the beginning.

Making sense of it is Willow.

Only Activate encodes domain expertise, building specific knowledge and best practices from every corner of facility and infrastructure management directly into the platform's functionality and decision-making processes. This enables greater understanding of complex interactions, behavior, and performance patterns – insights that let you take intelligent action. Activate's AI-powered feedback loop continuously refines and generates skills to become more intelligent and autonomous over time, reducing the need for human intervention.

With Willow Activate Technology, you get the oversight, insight, and foresight to activate your full potential, today and tomorrow.
