

First we trained 35,000 developers at Microsoft

Then we decided to expand our circle of friends

Wintellect
NOW

On-Demand Developer Training

IN-DEPTH

Receive the same training that has benefited tens of thousands of developers at Microsoft and other Fortune 500 companies

ONLINE OR OFFLINE

Enjoy access to a growing catalog of videos, and take it with you when you're on the road with native offline views for popular mobile devices

INDIVIDUAL OR BUSINESS

Purchase an individual account, or a business account that allows training managers to swap users in and out and track individual usage

COST-EFFECTIVE

For one low price, enjoy access to all courses, code downloads, and offline viewing - features that cost extra just about everywhere else

Visit us at www.WintellectNOW.com to see our full catalog of courses.

Go deep with our exclusive Video Series

WintellectNOW features comprehensive **video series** authored by some of the most respected names in the industry. Here are a few of our most popular series.

→ Advanced Threading

This master class in concurrent programming is authored by Jeffrey Richter and has been a staple at Microsoft offices around the world. Now you can get the same advanced training on writing multithreaded apps that has benefited devs on the Skype team, the Azure team, and many more!

→ Mastering .NET Debugging

John Robbins, aka "The Bugslayer," is one of the world's premier experts on debugging. Take the same master class on the art of debugging that has benefited thousands of Microsoft developers. And if you're debugging native code rather than managed code, there's a class for that, too.

→ Mastering ASP.NET Core

ASP.NET Core is the new open-source Web development framework from Microsoft that runs cross-platform on top of the .NET Core framework. Learn all about it in this exclusive, no-holds-barred series from Microsoft PM and ASP.NET Core architect Jeffrey Fritz.

→ Mastering XAML

Charles Petzold taught an entire generation of developers how to program Windows. Now he applies his extensive talents to teaching the fundamentals of XAML. The perfect series for developers who are learning to build applications for WPF, Windows, or UWP!

→ Mastering Power BI

Microsoft Power BI exists to provide deep visual insights into data. It supports hundreds of different data sources, excels at producing beautiful reports and dashboards, and works with a wide range of devices. Master Power BI and you master your data.

→ .NET Performance Tuning

Microsoft .NET simplifies software development, but if you treat the garbage collector as a black box and don't take time to understand the nuances of C# and the CLR, performance can be elusive. Learn how to squeeze your code until it screams.
