

Cloud Security

Review your cloud security score.

Review your cloud security posture —before someone else does

Securing your Microsoft Office 365 environment and data is a critical part of moving your workloads to the cloud. Wintellisys' team of Office 365 experts will lead you through the process of identifying key elements to better secure your Office 365 environment and help ensure that your company's critical data is protected. We use Microsoft's Office 365 Security Assessment, which offers a set of clear, proven processes and recommendations.

While security provided by cloud vendors is by far the safest environment to use today for your business, each of the settings must be defined and evaluated regularly.

Why a cloud security assessment?

When you move your data to a cloud provider, who is responsible for the security of your data—the cloud provider or your organization? Many business leaders view security as the sole responsibility of the cloud provider. However, true cloud security requires a collaborative effort between the provider and the organization itself. An Office 365 Security Assessment can help you identify the areas of your Office 365 environment that can be configured to enhance the security posture of your organization, for such things as authentication controls, the number of highly-privileged accounts, audit log review, external sharing of data and so on. By reviewing these controls and determining what is most appropriate for your organization, a Wintellisys Office 365 Security Assessment can help you protect your data and maintain good security practices.

Wintellisys has a long history delivering successful Office 365 and on-premises Microsoft solutions for customers, providing solid security recommendations with a focus on the needs of your users. Our expertise in Office 365, networking, security and change management allows us to provide you with the confidence that our solutions will be well-planned, effective and tailored to your company's specific requirements.

As a Microsoft Gold Partner, we can help you!

We have the skilled personnel, attack simulators, network scanners and technology expertise to evaluate your overall security posture and help raise the security of your cloud environment.

Take Action, Improve Your Score

TARGET SCORE

343

23 actions

BALANCED

These actions cover the basics, and include some defense in depth choices.

- ✓ **On-site** security overview
- ✓ **Evaluate** your security strategy
- ✓ **Identify** compromising security settings
- ✓ **Document** high, medium, low dangers
- ✓ **Review** mitigation plan

Key elements of a Wintellisys cloud security assessment

Kickoff workshop

Provide an overview of the engagement covering vision and objectives, requirements, next steps, and actions.

Learn the Microsoft Security Story and why they are the largest security company on the planet.

Learn about the global threat telemetry they receive and how they are using Artificial Intelligence to share this data across more than 200 brands.

Pre-assessment questionnaire

This helps you consider your own cloud usage and adoption. It looks at your current security requirements and objectives, and the regulations that your organization requires (HIPPA, SOX, GDPR).

This questionnaire helps provide the security context for Wintellisys experts to provide useful recommendations and guidance.

Identify/Discover risks

Provide a documented evaluation of your cloud security posture.

Explain the major findings and make mitigation recommendations.

Organize the findings into high, medium, and low categories to identify immediate issues to address.

Create security awareness.

Mitigation recommendations

Explain our methodology to implement high, medium, and low changes to further secure the environment.

Provide a roadmap of how best to address the issues identified.

Explain why periodic evaluations are required. Security is not a finish line to cross, but an ongoing journey.

What Wintellisys provides in this assessment

Whether you are planning a migration to Office 365 and want to plan your security policies and procedures correctly, or you are already using Office 365 and want to do the best job to secure your data, we have the experts to ensure your efforts will be successful.

We use proven tools and processes for identifying the most critical controls that should be applied in an environment. We rely on our years of experience in working with organizations of many sizes and industries to provide you with guidance in prioritizing and implementing those controls in phases. This minimizes disruptions to your employees. We provide an end-to-end approach that includes an organizational assessment, detailed review of the assessment and recommendations on next steps. Plus, we provide best practices on how to successfully implement Office 365 security features.

Because security is a continuous process, we also offer a monthly service that will provide you with a review of the current security recommendations you should address to help improve your security.

What's next?

Wintellisys offers an optional Monitor the Office 365 Cloud service to continually monitor and manage the security of your environment. Security is not a finish line, but rather a journey that we are on together. Let us be your trusted security consultants and monitoring team. Learn more at www.wintellisys.com.
