

Agent 365

The Enterprise Control Plane for AI Agents

Accelerate Your Frontier Firm Journey with Microsoft Agent 365 and WinWire AgenticOps

The Next Enterprise Challenge Isn't Building AI Agents. It's Operating Them.

Organizations are entering a new era where AI is no longer just a productivity tool, it is becoming part of the workforce.

Across every business function, AI agents are beginning to collaborate with employees, automate decisions, execute complex workflows, and augment business operations.

The challenge is no longer creating intelligence. The challenge is operating an intelligent enterprise. Without visibility, governance, security & operational discipline, AI agents quickly become another unmanaged technology estate-creating operational risk, compliance challenges, rising costs and missed business value.

Whether built on Microsoft or third-party AI platforms, enterprise AI requires a consistent governance and operating model to deliver trusted business outcomes.

Agent 365 provides the control plane for AI agents.

WinWire AgenticOps provides the operating model to govern, operate, optimize & scale your AI workforce with confidence.

Together, they help organizations transform an invisible AI workforce into a trusted, governed and intelligent enterprise - accelerating their journey toward becoming a **Frontier Firm**.

Make the Invisible AI Workforce Visible

"You already have dozens of AI agents running across your organization. You just can't see them."
Every organization is already building a digital workforce.

Dozens of businesses created AI agents operating without centralized visibility.

RPA bots evolving into intelligent autonomous agents.

Custom AI agents connected to enterprise applications and corporate data.

AI capabilities embedded across enterprise applications and third-party platforms.

Why Organizations Need an AI Operating Model

As AI adoption accelerates, three enterprise challenges consistently emerge.

No Identity

AI agents operate without standardized enterprise identity, ownership, or lifecycle management.

No Consistent Governance

Policies vary across platforms, creating inconsistent governance, security, and compliance.

Undefined Data Boundaries

AI agents increasingly access sensitive enterprise data without consistent guardrails, auditability, or governance.

Accelerate Your Frontier Firm Journey

Powered by Microsoft Agent 365 and WinWire Agentic AI @ Scale, combining Operational AI Services, the 3i Framework, and AgenticOps to help organizations govern, operate, and continuously optimize their AI workforce.

Imagine

Readiness & Landscape Assessment

Make the Invisible Visible

Engagement: Fixed-Fee Assessment

Deliverables

- Enterprise-wide AI Agent Inventory
- Governance & Security Maturity Assessment
- Agent Taxonomy & Registry Design
- Executive Roadmap & Business Case
- CIO/CISO/CAIO Executive Readout

Ignite

Governed Foundation

Establish the Enterprise Control Plane

Engagement: Fixed-Fee Implementation

Deliverables

- Microsoft Agent 365 Configuration
- Enterprise Agent Registry
- Entra Agent ID Deployment
- Microsoft Purview Integration
- Microsoft Defender for Agents
- Governance Policies & Access Controls
- AI Cost & ROI Dashboard

Impact

AgenticOps Managed Services

Monitor. Govern. Optimize. Scale.

Engagement: Monthly Retainer

Deliverables

- Operational AI Monitoring across Microsoft & third-party AI agents
- Security & Anomaly Management
- Agent Performance & Cost Optimization
- Prompt, Model & Workflow Optimization
- Standardized Agent Onboarding
- Quarterly AI Portfolio Reviews
- Executive Governance & Advisory

Outcome

A complete understanding of your AI landscape and a prioritized roadmap for enterprise-scale AI governance.

A secure, governed, enterprise-ready AI foundation built on Microsoft's control plane for AI agents.

A continuously improving AI operating model that maximizes adoption, governance, operational excellence, and long-term ROI.

Why WinWire

Microsoft-First. Business-First. Outcome-First.

Microsoft AI Expertise

Deep expertise across Agent 365, Microsoft 365 Copilot, Azure AI Foundry, Microsoft Fabric, Entra, Purview, Defender, and the broader Microsoft AI ecosystem.

Agentic AI at Scale

Powered by our **Operational AI Services, 3i Framework, PRISM, AgentVerse, and AgenticOps**, we help organizations move from isolated AI initiatives to enterprise-wide transformation with governance, operational excellence, and measurable business outcomes.

Business-Led Transformation

Every engagement starts with business priorities—not technology—to accelerate measurable business outcomes, governance, adoption, and ROI.
