Cloud App
Modernization

App of the **Future**

Envision the App of the Future with **WinWire** & **Microsoft**

The application development industry is evolving at a break-neck speed. To survive and thrive in this digital era, organizations look to engage customers through user-centric apps that are intelligent and ready to take the business in the future.

However, many organizations struggle to envision their 'App of the Future.' To help them harness the power of cloud-native technologies and understand the possibilities, **Microsoft** and **WinWire** offer the App of the Future workshop.

App of the Future helps customers achieve specific business outcomes by replacing the existing legacy application into a "ready-to-execute" cloud-native app architecture & planning for execution in an accelerated timeline. The **5-days workshop** will allow us to uncover top business objectives, ideate solutions, and create a rapid prototype & architecture design for the cloud-native application on Azure.

Our Methodology - App of the Future

Our hands-on consulting and envisioning methodology enable organizations to move forward in their application development or modernization journey on Azure.

Envisioning workshop

- Through a collaborative design-led workshop approach, we discover, envision the role of a modern cloud-native application

- Design a user-centric approach & define the scope of a pilot engagement

- Review requirements, align stakeholders, and finalize timelines for a pilot

Rapid prototype & architecture design

- Illustrate the solution's essential functionality, rapid prototyping, and architecture design on Azure.

- Technical review session.

- Feature prioritization, project estimate, and costing

Key Deliverables

App feature application envisioning & functionality based on desired business outcomes.

Customized demo to visually present what the App could look like based on envisioning/ideation.

A solution architecture proposal for the app that include details on Azure services & Azure cost estimates.

Our Application Modernization Approach

Our proven application modernization approach uses data insights and AI-powered automation to assess the performance and use of applications.

Assess → **Design** → **Modernize**

Catalog existing applications, database & systems including criteria for planning any apps for the cloud
STEP 1

Architect core application environment and **define technical design**
STEP 2

User-centered design and Technical architecture definition leveraging modern technologies
STEP 3

Follow **DevOps** process to implement, test functionalities and deploy in iterative manner
STEP 4

Leverage a **well-defined factory model** to modernize the application portfolio overtime
STEP 5

About WinWire

Experts in App Mod, Data & AI & Modern Workplace

Recognized Microsoft Partner of the Year Awards 2021 - Healthcare & App Modernization

Advanced Specialization for Modernization of Web Applications to Azure

14 Microsoft Gold Competencies
