

Azure Arc-enabled SQL Server Offering

Unleash the Power of Azure Arc with WinWire

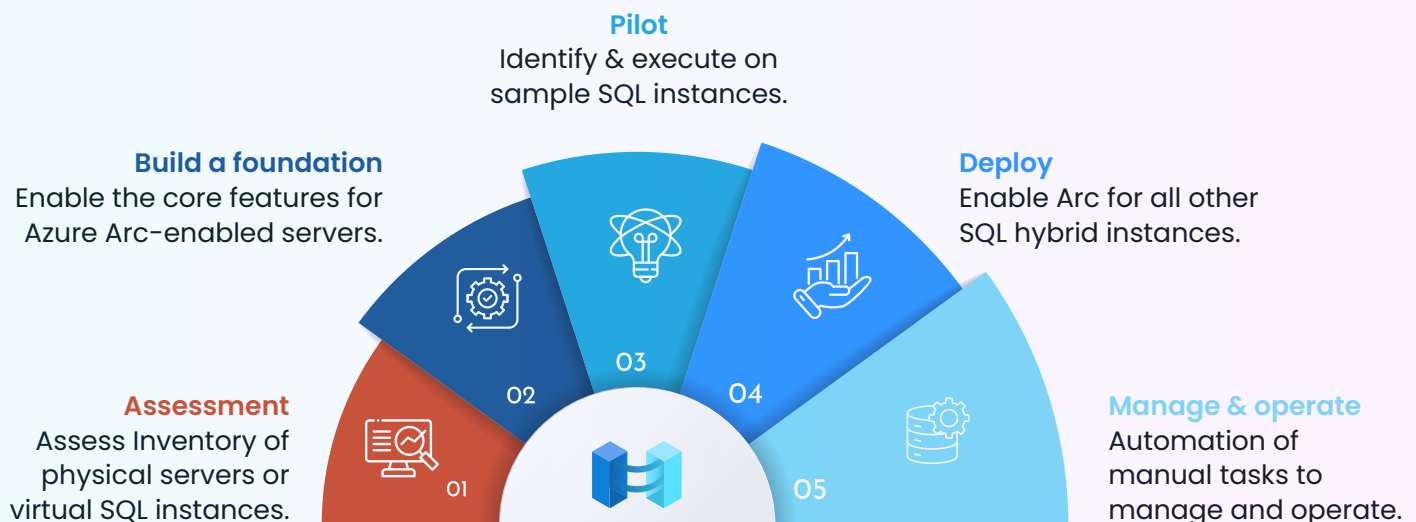

Embrace Hybrid Design of Azure Arc-enabled SQL Solutions with WinWire

Our Azure Arc-enabled SQL Server offering empowers clients to manage their on-premises and Azure SQL instances through a single view of management and control. A unified control for SQL instances, whether on-premises, edge, or in other clouds.

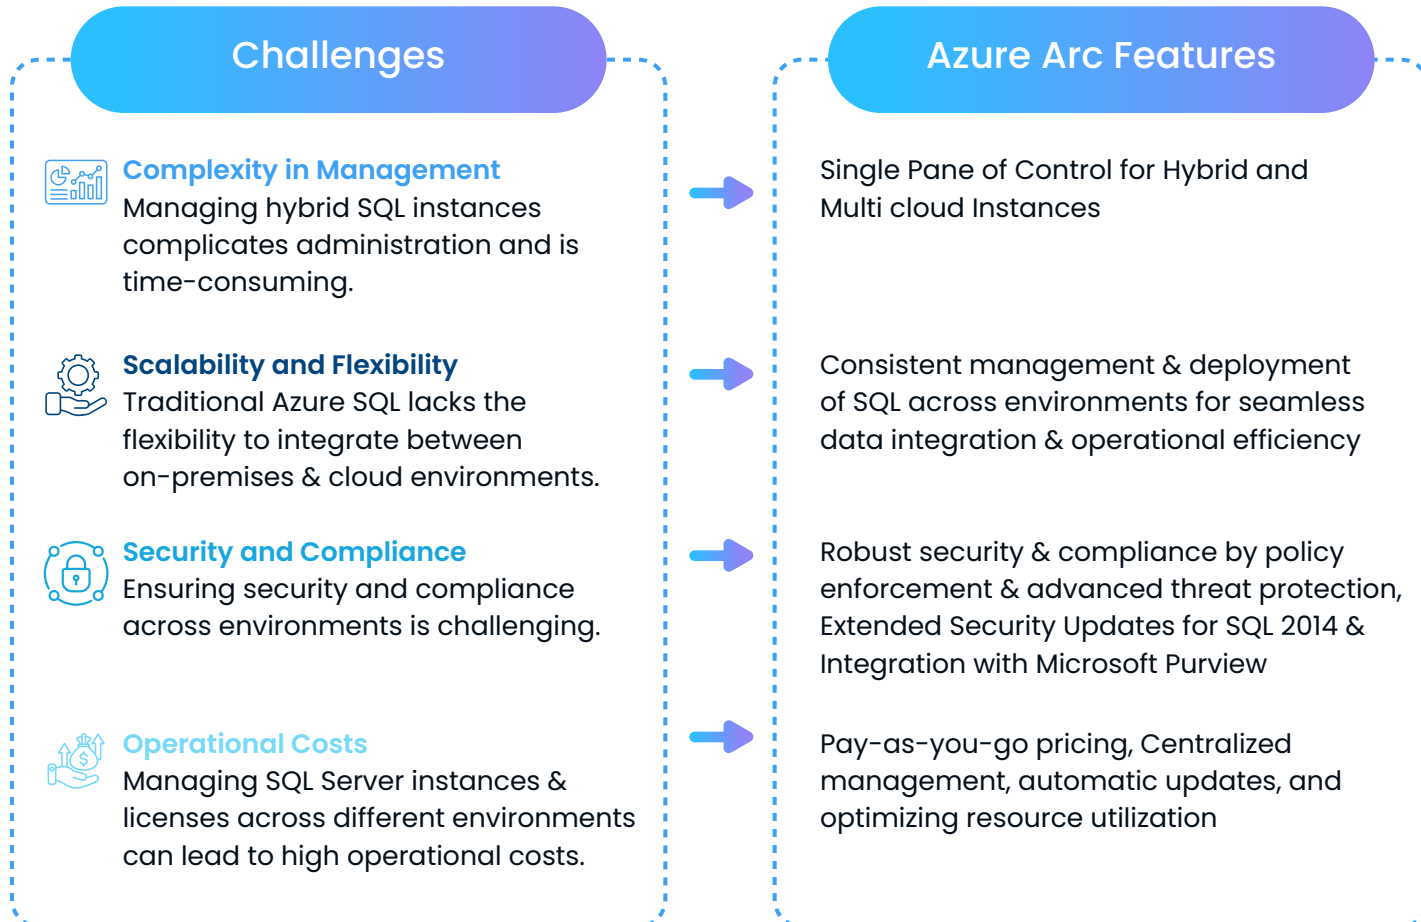

WinWire can help you streamline operations by automating updates and best practices assessments resulting in optimized performance and cost leveraging Azure Arc.

Jumpstart your Azure Arc-Enabled SQL adoption with WinWire

WinWire offers Azure Arc based operational transformative initiatives aided by WinWire's accelerators Win with Arc and WinMaaS to optimize cost savings for up to 30% right from the planning till the implementation.

Organizations that operate in hybrid environments often encounter challenges in maintaining consistency across traditional SQL Server instances. Azure Arc provides capabilities to manage and streamline on-premises SQL Server instances, as well as other servers and applications that are running outside of Azure.

How WinWire Can Help?

Consult WinWire for a 4-week Assessment and Pilot of your Hybrid SQL environment

Identify inventory of existing SQL instances

Identify end of support SQL versions

Assess Azure connected machine agent needs

Scope out the pilot

Identify cost and operational benefits

List risk and mitigation measures
