WinWire

AI Meets Business Intelligence: **Power BI + Copilot** for Next-Level Analytics

Many organizations are exploring AI, but despite clear signs of success, widespread adoption remains a challenge. **A 2025 Gartner survey of 215 IT leaders revealed that while 94% reported measurable benefits from Copilot, only 6%** had fully deployed it.

Why the hesitation?

- **72%** are still stuck in pilots.
- Only **11%** are exploring broader implementation.
- Despite proven gains, most organizations are held back by the same concerns.
- Will Copilot scale across teams, or stay siloed in experiments?.

Here's your chance to find out.

With our Copilot + Power BI pilot program, you'll get hands-on experience with Copilot in Power BI-on your data, your reports & your terms.

WinWire's Approach: From Proof to Performance

Our pilot program is designed to move you from exploration to evidence—fast. You'll see how Copilot performs with your data, your reports, and your users.

Select & Plan

- Identify two high-impact dashboards
- Define success metrics and baseline benchmarks

Build & Enable

- Rebuild reports using Copilot prompts
- Enable and train users
- Monitor usage & adoption in real time

Measure & Recommend

- Collect user feedback
- Track productivity improvements
- Deliver a summary report with rollout

Deliverables

- Copilot-Enhanced Power BI Reports
- Live Dashboard Tracking Adoption + Productivity
- Consolidated User Feedback
- Clear, Actionable Recommendation to Scale

Business Value

- Slash the time it takes to build reports
- Show real ROI, not just potential
- Empower more business users-not just your BI team
- Build a case your stakeholders can't ignore
