

Data Governance Services on Azure Purview

Maximize the value of data in cloud

Technology developments have compelled organizations to store more data. However, data quality is often neglected and costs organizations **\$12.9 million every year**. Apart from the immediate impact on revenue, poor-quality data increases the complexity of the data ecosystem and leads to poor decision-making.

Data governance (DG) encompasses the people, processes, and technologies required to manage and protect data assets. DG helps organizations address their most challenges related to data quality and literacy.

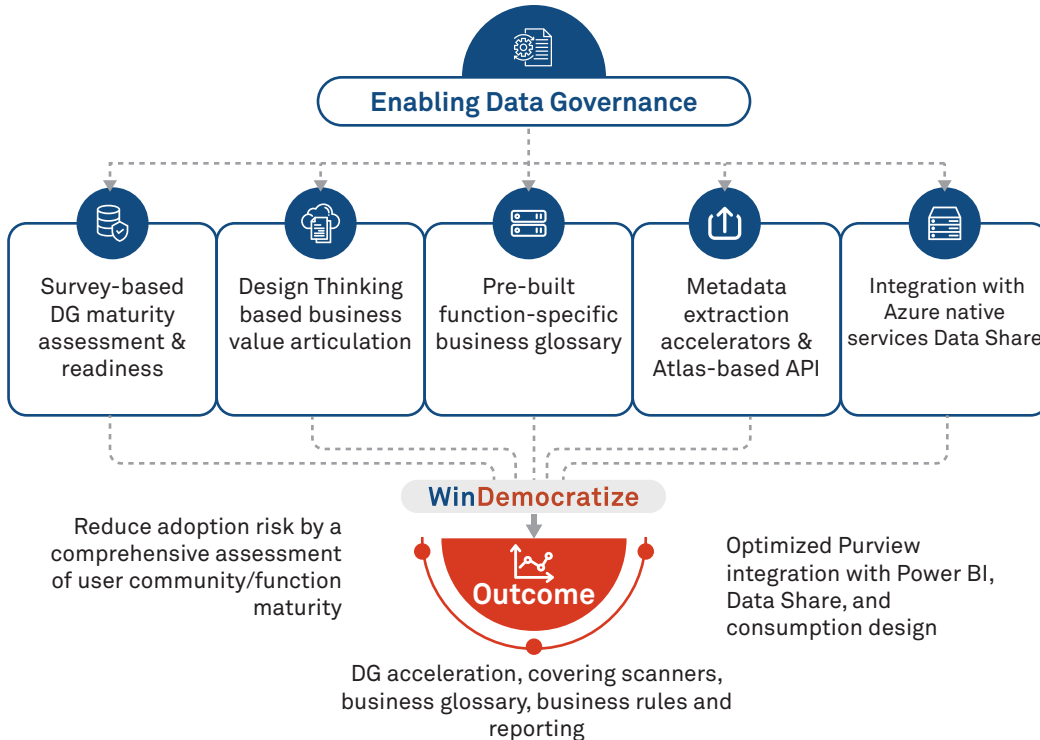

Governance Made Simple with WinDemocratize

WinWire, a data-driven digital engineering organization, is offering **WinDemocratize**, powered by **Azure Purview**, to help organizations adopt a modern data platform and assist them in taking control of their cross-organizational data.
