

WinWire's Generative AI-based Intelligent Code Processing Solution

The solution is developed leveraging Azure OpenAI and facilitates the generation of technical documentation of legacy code. The solution employs prompt engineering techniques to enhance the precision and accuracy of the generated content.

Creates & update technical documentation for legacy code, ensuring accuracy & consistency while reducing manual efforts.

Facilitates efficient knowledge transfer within legacy code by providing clear & up-to-date technical documentation

Increases efficiency and speeds up the development lifecycle by automating the generation of technical documentation.

Business Value

Automates the process of creating technical documentation for older software systems.

Standardizes documentation ensuring that all documentation is consistent in style, format, and content.

Improves the documentation quality & makes it easier to understand.
