Power Platform Assessment

WinWire

The Microsoft Power Platform is a low-code development platform transforming how business solutions are delivered. The platform helps you automate business processes, brings data from all your sources from the IT ecosystem into one powerful platform, analyze data and visualization to achieve business transformation.

This low-code platform promises significant citizen development, where business users can build apps and virtual agents at speed with little to no IT intervention. Power Platform's inbuilt AI and Robotics capability also enables organizations to gain a competitive edge by accelerating application development.

Key bootcamp activities

WinWire, a Microsoft Managed Partner, can help you guide and accelerate your low-code journey. Our Power Platform experts will show you what the platform has to offer and where its components can plug into existing opportunities within your environment during this assessment.
