WinWire

SQL Server Data Warehouse to Microsoft Fabric Modernization

Migrate up to 25% faster to Microsoft Fabric & 30% on program cost savings.

In today's rapidly evolving business landscape, maintaining an outdated SQL Server infrastructure can be a significant liability. With many older versions of SQL Server nearing the end of their mainstream support, and others facing imminent discontinuation, it's becoming increasingly clear that modernizing your SQL Server workloads is the most effective way to keep your business competitive and secure.

As businesses grow and evolve, so do their data needs. That's why modernizing your data platform and services with Microsoft Fabric via SaaS models, such as the Lakehouse architecture on OneLake, is such a smart move. With these state-of-the-art solutions, you'll enjoy improved scalability, enhanced performance, and greater overall efficiency.

Migrate Rapidly with WinWire's MaaS Framework and WinSQL Services

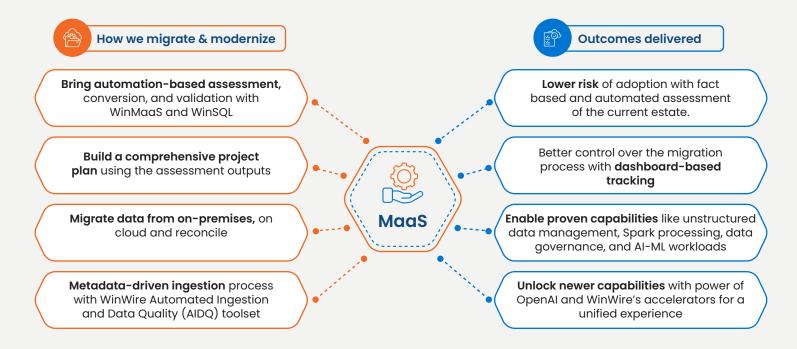

WinWire, an exclusive Microsoft Solutions Partner, helps organizations modernize and migrate their SQL Server Databases to Fabric OneLake and Fabric Data Warehouse by leveraging our automated migration solution -**WinMaaS** and **WinSQL** services for accelerated migration with Microsoft 'Cloud Adoption Framework' principles.

Our simplified approach for migration while mitigating risk, and without time and cost overrun:

| Analyze 📿 | Architect | Pilot 📰 | Enterprise rollout |
|--|--|---|---|
| Analysis of the existing SQL | Define the future state | Execute a pilot program to | Execute in prioritized waves |
| Server Data Warehouse | architecture on Fabric: | finetune architecture | for migration of SQL Server |
| environment including | • Data architecture best | components, frameworks, | Data Warehouse by subject |
| workload inventory. | practices covering storage, | reusability. | areas: |
| Plan - Aspects of migration skillsets, complexity, code base, environment. | | Migrate data models, code, & data leveraging WinSQL & WinMaaS for SQL Server | Adhering to benchmark for performance |
| • Scope – Understand the | Setting up of OneLake and | • Build migration and | • Reconciling outputs for workloads |
| SQL Server landscape & | Microsoft Fabric data and | modernization scale-out | |

Get Started with SQL Server Data Warehouse migration to Microsoft Fabric

WinWire delivers a 4-week advisory service on Assessment & Pilot to demonstrate proof-of-values and building scale-out plan in Sprints.

Why start Microsoft Fabric adoption with WinWire?

Up to 30% cost saving and 25% faster migration through automation.

Demonstration lab for unlocking doors to Azure OpenAl and machine learning.

Proven capability for enabling a unified experience of data prep, data management, data warehousing, advanced data & analytics.

Customer story

WinWire is helping employee-owned general contractors and construction management company in the US, in building robust data capabilities on Microsoft Fabric Platform to enhance value from their data and offer unified and secure user experience.
