withum

Unlock the value of your data by discovering reporting capabilities

Powered by Microsoft Azure

Thorough diagnosis of how you can leverage and expand upon current licenses to help transform your organization into a data-driven enterprise

M365/Azure Architecture Review

Data Source Discovery and Review

Current Reporting Assessment

Spend time analyzing, not preparing

Remove Spreadsheet Exports

No more copying and pasting data from a source system, exporting to Excel, csv, or another format, we can identify how to automate the retrieval of your source data for ingestion into a centralized "source of truth" Datamart

No More Templates and Formula References

With a common data model, no more overwriting information or preparing formulas. Your data stack will prepare and conform your data so that reports automatically update as new information arrives in your data store

Gain Actionable Insights From Your Data

Rather than spending time preparing the data to distribute amongst stakeholders, unlock insights from your reports and dashboards in order to facilitate the business conversations that drive business objectives
