

Customer Success Story – Governing App Dev with the Power Platform CoE Starter Kit

About the Client:

An American processed food and snack company headquartered in New Jersey.

Background and Challenge:

As a food processor and manufacturer in a very competitive business environment, decision-makers realized they must quickly bring innovative solutions to the business as quickly and effectively as possible to effectively compete. Based on the success of early solutions built on the Power Platform, they realized the need to effectively govern the entire low-code app dev process to ensure security and compliance to corporate standards. Without governance, solutions would be developed with little oversight and adherence to security, usability, and tracking mechanisms.

Solution:

Withum deployed Microsoft's Power Platform Center of Excellence (CoE) Starter Kit, reviewed current app and flow usage, advised on DLP Policy and environment best practices, and created a strategy and roadmap for maturing their Power Platform Center of Excellence.

Benefits/Results:

The organization's IT group has the confidence to move forward with their Power Platform Roadmap and Citizen Developer program, knowing that the appropriate governance guardrails will be in place.
