**Modernize Your Data Platform:  
3-8 Week Workshop**

Wizeline is a global technology services provider with operations in the U.S., Mexico, Vietnam, Thailand, Australia, and Spain. Wizeline partners with global enterprises and scaling startups to build high-quality digital products and platforms that accelerate time to market.

Wizeline supports the entire journey for companies to become data-driven, helping them design and build next-generation cloud data platforms.

## CHALLENGES

Companies need to make informed decisions, reduce operational burden, optimize resource utilization, and create competitive advantages by leveraging the power of their data.

## IDEAL SOLUTION

Modern data platforms leverage the power of your data by migrating key business workloads to the cloud and implementing data visualization solutions in the cloud.

## DESIRED OUTCOMES

Through Wizeline's Cloud Foundations framework and workshops, our multidisciplinary team assesses business and technology needs to develop an actionable cloud adoption plan to help you modernize your data platforms.

# Modernize Your Data Platform with Wizeline

Take the next step in the data management strategy of your company with Azure cloud solutions. As a Microsoft Azure Gold Partner, Wizeline's Azure-certified professionals will share best practices and the latest methodologies to help you modernize your data platforms. Through a business and technical assessment, we will design a clear roadmap to help you adopt Azure data solutions.

## CLOUD AND DATA CAPABILITIES ASSESSMENT

In the business discovery phase, we define the goals, objectives, pain points, constraints, and application inventory.

## STRATEGIC PLAN FOR DESIRED FUTURE STATE

In this phase, we determine which Azure cloud solutions to leverage and define governance, monitoring, reliability and data analytics capabilities.

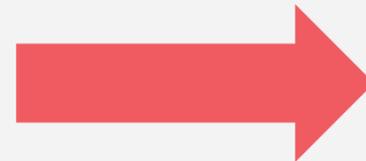

## ROADMAP TO START THE MIGRATION

In this phase, we design the data sources integration strategy and identify the timeline and resources to launch a successful implementation.

# Modernize Your Data Platform Workshop: Process & Deliverables

## KEY ACTIVITIES

- 1 Business discovery
- 2 Technical onboarding
- 3 Current cloud capabilities assessment
- 4 Requirements gathering and planning for a desired high-level future state
- 5 Creation of a high-level strategic plan
- 6 Selection of first workloads or data sources to move/integrate to the cloud
- 7 Plan and roadmap for first workloads or data sources to move/integrate to the cloud

## DELIVERABLES

Completed cloud assessment documentation

Requirements to achieve desired high-level future state

High-level strategic plan and roadmap to achieve the future state

Plan and roadmap to move and/or integrate key workloads to the cloud

### TIME & COST:

Duration: 3-8 weeks  
Costs: \$30K-\$100K\* \*\*

# Modernize Your Data Platform: Key Activities

## Business Discovery

Pre-work: Prior to the workshop, we define the stakeholders, decision-makers, and SMEs to be involved to gather information about current service areas and departments, current services provided, the goals and business objectives, as well as pain points, problems, and constraints.

## Technical Onboarding

During this activity, we do an application inventory at a high level. We review the function, dependencies, technology, infrastructure, architecture, data requirements, and sources. We identify the first candidates to be moved to the cloud.

## Current Cloud Capabilities Assessment

This activity consists of a gap analysis, identification of the services leveraged, pain points, and problems. We also review constraints such as regulatory, corporate control, and security.

## Gather Requirements and Plan for Desired High-level Future State

In this activity we review the technologies and cloud services to leverage, structure the governance, define the built-in security, and evaluate on-premise data center connectivity. We also collect the monitoring, auditing, and redundancy requirements, as well as the reliability and data analytics capabilities.

# Modernize Your Data Platform: Key Activities

Creation of a High-level Strategic Plan and High-level Roadmap to Achieve the Future State

During this activity we start recommending best practices for the cloud. We work on a high-level design of the cloud landscape and the prioritization of workloads considering feasibility, effort, and time. We look for quick wins that drive business value narrowing down the round of first candidate movers.

Selection of First Workloads or Data Sources to Move/Integrate to the Cloud

We create analysis proposals for the first candidate movers and make a selection of ideal candidates based on prioritization. We run a deep dive of dependencies, technology, infrastructure, and architecture.

Plan and Roadmap for First Workloads or Data Sources to Move/Integrate to the Cloud

During this activity we design the mid-fidelity cloud architecture/infrastructure, the moving strategy, and the data sources integration strategy. We identify the risks, create a migration strategy, and define the assumptions and validations plan, as well as provide estimations of time and effort. We structure the definition of done, testing strategy, and release plan.

# Modernize Your Data Platform Workshop: Considerations

**Connect with us to find out what's  
right for you!**

\*Prices will vary according to the number and level of complexity of the selected applications

\*\*Discounts may apply If customer decides to move to the next stage: Cloud Enablement
