

AI Transformation for the Bold Enterprise

Deploy AI anywhere work happens

Customer-facing Agents

Agents that handle natural, end-to-end customer interactions across voice, chat, email and apps - resolving issues with speed and accuracy.

Internal Agents

Agents that handle behind-the-scenes work - coordinating systems, reconciling data, and completing processes with consistency and speed.

Back-office Agents

Agents that support employees in real time - surfacing answers, executing system actions, and removing friction from everyday work.

AI Agent Platform With Embedded Implementation.

Wonderful combines a powerful AI platform with best-in-class local deployment to deliver enterprise-grade AI agents for your most complex workflows.

Fully-generative agentic platform

An enterprise-grade platform with advanced tools for designing, orchestrating, and continuously improving specialized AI agents at scale.

Dedicated local delivery

An embedded local team of engineers and specialists works on the ground with customers to deliver rapid, compliant, and scalable deployments.

One Unified AI Infrastructure for Your Agents

With Wonderful's unified agent infrastructure, enterprises get a single foundation for agent creation, training, deployment and governance. Models, integrations, and memory operate as one system, so teams can build agents once and deploy them across channels seamlessly.

The Platform to Build, Manage, and Optimize AI Agents

Agent Builder

Create and configure AI agents using low code or natural language. Control agent goals, tone, and guardrails from one place.

Integrations

Connect to your internal systems like CRM, telephony, messaging, ticketing and more via API or MCP.

Governance

Get full oversight with policy-focused instructions to ensure enterprise-grade compliance.

Dashboards

View live performance metrics that give you full visibility into usage, efficiency, and outcomes.

Tools & Skills

Equip agents with specialized skills and logic, that load dynamically and expand their abilities.

Evaluations

Validate performance before launch with built-in, automated testing and evaluations.

Channel-agnostic

Deploy agents to any channel across voice, chat, email, apps or ChatGPT.

Built for The Enterprise

Secure & Compliant

Protect data with encryption and PII redaction, while guardrails and compliance controls ensure your policies are followed in every interaction.

Fully Customized

Agents are tailored to your brand and configurable across systems, workflows, and data to ensure they operate according to your standards.

Unlimited Scale

Scale effortlessly with an architecture built for massive concurrency, delivering enterprise-grade performance, uptime, and stability.

Visibility & Oversight

Monitor agents in real time with enterprise access management, roles and permissions, data retention, and full transparency into every interaction.

Standards & Compliance
