

Microsoft Compliance and Risk Workshop

WWT's Microsoft Data Compliance and Risk Workshop helps organizations determine their Microsoft 365 compliance posture. With the discovery of these compliance gaps, admins can work on improvements and recommendations to close the gaps using Microsoft Compliance Manager. This three-day workshop covers intelligent compliance and risk management solutions which helps organizations assess compliance risks, govern and protect sensitive data, and respond to regulatory requirements.

Microsoft Compliance Manager is an end-to-end solution that helps organizations manage their compliance requirements with greater ease and convenience. It also helps simplify compliance and reduce risks by providing pre-built assessments for common industry and regional standards and regulations. Workflow capabilities help to efficiently complete risk assessment using a single tool and step-by-step guidance on suggested improvement actions to help comply with standards and regulations. The risk-based score helps to understand the compliance posture and the progress is measured in completing the improvement actions.

What to Expect

This workshop will help clients understand the current compliance posture of the organization and expose any compliance gaps. Recommendations will be made to fill in those compliance gaps and how to make improvements.

- ✓ Discussions on Microsoft's compliance vision
- ✓ Automated Discovery
- ✓ Assess components to determine risks and current compliance posture
- ✓ Compliance score
- ✓ Prioritize compliance recommendations based on the assessment findings
- ✓ Build a roadmap of the implementation of the prioritized compliance recommendations

Goals & Objectives

This three-day workshop includes a pre-engagement call to discuss customers needs and expectations.

Day One:

Kick-off meetings will include a deep-dive of the Microsoft Compliance tool, which will lead in to the setup and configuration of a trial Security E5 license, this phase will also include configurations of relevant policies and controls for data discovery.

Automated Discovery is a two-week discovery phase where Microsoft Compliance tools will flag targeted data which cause compliance risks in the organization.

Day Two:

We will prepare log files and reports, review and analyze the log files, decommission the trial security license and configurations from the customer's tenant.

Day Three:

We will prepare a findings report which exposes compliance gaps in the environment and create a recommendations report to review with the customer. Overview of the Microsoft Compliance tool is done which will include a customer immersion experience (CIE) for the customer to have a hand-on experience with the Microsoft Compliance manager. Recommendations and next-steps will be discussed to implement compliance and risk controls in the Microsoft 365 environment to ensure compliance. This phase will also include discussions on creating a compliance strategy and implementing the top priority items recommended by the Security Architect.

The WWT Difference

With 10+ Microsoft Gold Competencies – including Gold Windows and Devices, Cloud Productivity, and Silver Security – WWT is well suited to help our customers determine their compliance posture. Our proven methodology mitigates risk, accelerates deployment timelines and ensures the end user community is fully bought into the end solution.
