

If an agent issues a refund at 3am, who authorised it?

AI agents act on their own. When one acts badly, someone will ask you to prove what happened.

Log files aren't proof.

Anyone with database access can edit a log. When a regulator, auditor, or court asks what your agents did, you need evidence — not text files.

Every agent action, on one tape.

One row per action, in order, each row carrying its own
proof — LLM calls, tool calls, sessions, approvals.
Signed at the moment it happened.

A full compromise of Wyttness exposes tokens, not people.

Signing and PII keys are generated in your browser and never sent. Customer data is pseudonymised before it leaves your infrastructure.

■ BUILT ON THE STANDARD

Built on Microsoft AGT. Locked to nobody.

Evidence wants a standard, not a vendor. Wytness builds on the open-source Agent Governance Toolkit — and runs wherever your agents do.

Evidence Packs your auditor can verify without us.

SOC 2, EU AI Act and ISO 27001 packs — built to report their own bad news, checkable by anyone, no Wytness account required.

■ START RECORDING

From \$199/month. Flat per tier.

Ingestion never stops and data is never deleted.
