

Xenit Fabric Accelerator

Data Analytics by Xenit AB

Empowering organizations to maximize Microsoft Fabric's full potential with expert guidance – delivered by Xenit, your trusted Microsoft Partner.

Xenit Fabric Accelerator

Are you planning to implement a modern and AI ready analytical platform with Microsoft Fabric?

Do you already have an analytical platform and you are seeking to enhance your capabilities through Microsoft Fabric?

Or could it be that you are currently using Power BI and you wish to take the next step by adopting Microsoft Fabric?

If YES ...

Xenit offers **Xenit Fabric Accelerator** to ensure you maximize the value from your investment in Microsoft Fabric.

This offering provides expert guidance and hands-on support to **accelerate** adoption, mitigate risks, and establish a solid **foundation** for long-term analytical success.

What is Microsoft Fabric?

Microsoft Fabric brings data and AI together in one unified platform, empowering organizations to make faster, smarter decisions with seamless insight access.

Common challenges

In our experience, even with the perfect tool organizations struggle to enable the full potential. Common challenges include:

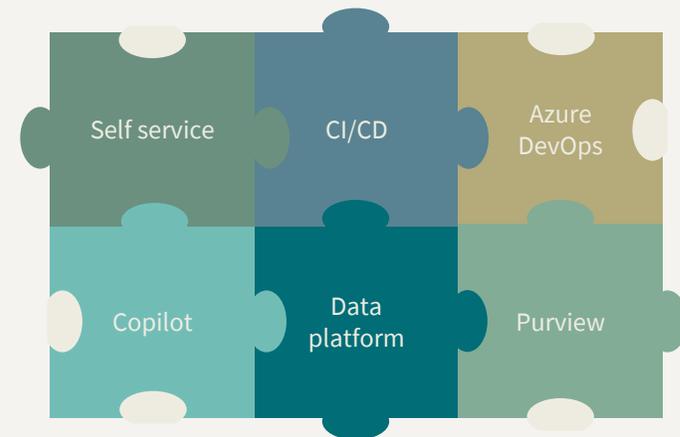

- Uncontrolled journey with unnecessary complexity
- Adapted technical landscape
- Data governance and security
- Cost- and performance management
- Scalability and resource allocation
- Power BI strategy in relation to other services
- Learning curve and skillset for internal capabilities
- Version control, collaboration and traceability
- Being too restrictive or unrestrictive of capabilities
- Visualizing too much and underestimating storytelling
- Not empowering a data culture

Covered areas through a series of workshops

Xenit Fabric Accelerator address common challenges to minimize risks, accelerate implementation and adoption and secure a future proof foundation adapted for growing demands of business analytics.

- **Architecture** to leverage Copilot and our proved, fully developed solution framework based on the medallion architecture and built on Microsoft Fabric. Ready to be adapted to your environment
- **Performance** to ensure that data modelling and data architecture support optimal performance as business analytics spreads across the organization for the growing demand
- **Security** to maintain best-practices for Microsoft Fabric administration, governance, user sharing, and data security
- **Visualization** to maintain best-practices for Power BI when designing reports and the aspects of storytelling
- **Scalability** to establish best practices for publishing artefacts, reports, managing users, and implementing administration across the organization
- **Governance** to adapt Microsoft Fabric rollout, CI/CD implementation, ownership of processes, requirement management using Azure DevOps and Microsoft Purview
- **Self-service analytics** to reduce dependency on IT, accelerates insights, and drives business agility by putting the power of data directly into the hands of users

COMMERCIAL MODEL

Method

You receive **advisory through a series of workshops**, tailored to your current situation and future goals, to maximize the value of your Microsoft Fabric rollout.

Deliverables

Following the workshops, we deliver **consolidated documentation recommendations**, and a high-level **action plan** to drive implementation and adoption.

Pricing

Xenit Fabric Accelerator is structured in a modular manner, allowing its scope to be adjusted as required. The **price** can therefore be **tailored to your unique circumstances and needs**.
