

Transforming Your Documents into Actionable Intelligence

**Extract Data and Insights.
Drive Operational Excellence.
Accelerate Strategic Decisions.**

xMentium rapidly classifies, tags, and relates huge volumes of unstructured documents for efficient operations, improved workflows, stronger compliance, and optimized financial performance.

xMentium Delivers Document Intelligence for Your Enterprise

Extract Data from Documents at Scale: Our Azure AI-powered platform identifies and extracts critical information from complex business documents with unmatched precision, capturing nuanced language, essential details, and key business terms with high fidelity.

Increase Insight across Functions: Give legal, operations, finance, and compliance teams a unified view of rights and obligations, regulatory requirements, company policies, and operational details.

Support Unprecedented Strategic Analysis: Transform extracted document data into comprehensive intelligence, enabling expense and efficiency analysis and eliminating data and knowledge blind spots.

Optimize Your Processes: Streamline engineering, production, and business workflows by surfacing the right information at the right time, reducing manual review, and raising team alignment.

How xMentium Works

Our proven AI-powered platform transforms unstructured document data into tagged and searchable data assets where deep analysis reveals previously unavailable insights.

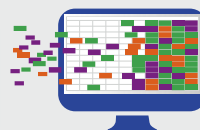

Import

Bring in documents from any source. Drag and drop files or connect to existing repositories.

Enrich

Automatically tag language blocks, terms, and entities with precision. Transform text into structured and searchable data.

Analyze

Uncover patterns, risks, and opportunities across vast sets of documents through focused Knowledge Set insights.

Distribute

Share actionable data and insights through reports, APIs, and integrations so that intelligence powers every decision.

"xMentium transformed our approach to Document Intelligence. We uncovered critical insights buried in hundreds of thousands of documents, enabling us to make faster and more informed decisions across our entire operation."

Chief Operating Officer, Fortune 500 enterprise

High-Impact Use Cases Across Industries

Optimized Operations

Identify underutilized resources, optimization opportunities, process inefficiencies, and unexploited revenue streams while freeing resources to innovate.

Revenue Leakage Identification

Detect missed billing opportunities, contract deviations, and pricing inconsistencies across customer and supplier agreements to find lost revenue, optimize costs, and prevent future leakage.

Asset Intelligence

Apply key information from engineering documents, SOPs, service agreements, and supply contracts to asset registries for better asset management.

Key Features Built for Enterprise Scale

Enterprise-Ready AI Solutions: Powered by Azure AI, Azure Data, and Azure Compute, xMentium applies a combination of LLMs, VLMs, and trained SLMs, with other machine learning tools and techniques, to parse and understand business documents, contracts, policies, technical documentation, manufacturing SOPs, and engineering drawings across industries. No tuning required.

Automatic and Custom Tagging: Automatically and manually classify, tag, and capture key IDs, terms, obligations, dates, and other critical information based on your enterprise taxonomy, ontology, and business requirements.

Best-in-Class Ingestion, Extraction, and Tagging Platform: File conversion through OCR, LLM, VLM, NER, RegEx, LLM cost and quality management, chunking, grouping, and multidimensional tagging and analysis orchestrated at scale.

Document Review Console: A powerful side-by-side interface for human-in-the-loop quality review and data enhancement.

Enterprise Data Integration: Push contextually tagged document data into your asset registry, SharePoint, file servers, or business systems, enabling teams to search across the document database by category, obligation type, date, or any relevant identifier.

Why Enterprise Leaders Trust xMentium

Handles Real-World Document Complexity: Seamlessly processes multipart documents, layered amendments, tables, images, handwriting, and mixed content types across business functions.

Drives Cross-Functional Collaboration: Bridges legal, technical, operations, compliance, and finance teams by surfacing key obligations and opportunities across contracts, policies, engineering, manufacturing, and business documents.

Proven at Enterprise Scale: Handles millions of business documents across enterprise repositories and business systems.

Full Data Control and Security: Your data remains secure, private, and fully under customer control hosted in Microsoft Azure (public or private hosted) with enterprise-grade security and governance. SOC 2 compliant.

Revolutionize Your Document Intelligence
