

Managed data-access layer to avoid tight coupling with your database.

A database abstraction layer with data APIs is an **effective approach for scalability, flexibility, and long-term maintainability**, particularly in enterprise applications by adopting **low-code platform and microservices architecture**.

Database Abstraction Layer

Resolve data inconsistency

Performance optimization

Enable RBAC data access

Environment agnostic

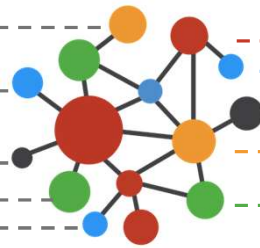

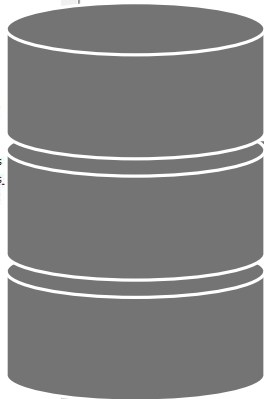

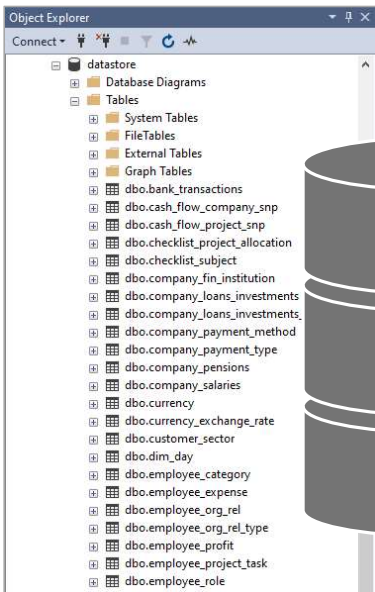

Improves code maintainability

Turn your database into an Awesome Web-app.

Revolutionizing Data Management: From Data Model to Full-Scale Application in Minutes.

Our **low-code data platform** bridges the gap between database design and application development, enabling you to **transform data models** into fully operational web applications - quickly, efficiently, and without coding expertise.

Reveal your database True Colors.
