

DATA PROTECTION SUITE from **XPLUS**

– Database and Personal Data Anonymization Tools

Effective Database and Personal Data Protection for Microsoft Dynamics 365 FSCM/AX 2012

We have translated GDPR, PII, and other local regulations as well as **business needs** into best corporate practices.

Apart from such legislature as **GDPR** and **PII**, you may have business reasons for database anonymization, so that unauthorized people do not access sensitive data. Or some personal data need to be pseudonymized, which means the original values of the data may later be retrieved for a potential future audit by the fiscal authorities. Another case is when you are asked to report on how you are processing someone’s personal data. Whatever the need, it is catered for by the **Data Protection Suite**.

FEATURES

- A deployable out-of-the-box package ready to install
- Fast implementation – a product rather than a project approach
- Added value in the form of a consulting knowledge base
- Available to anyone using MS Dynamics 365 Finance & Operations and dedicated to it (also available for MS Dynamics AX)
- A customizable tool dedicated to any search and anonymization automation requirements in any country
- Microsoft certified
- License based
