

Make Dynamics 365 work for you, not the other way around

Deliver a Dynamics 365 implementation built around your real processes, with clear scope, controlled risk, and XPLUS automation built in from day one.

Dynamics 365 Implementation by XPLUS

End-to-end Dynamics 365 implementation that combines expert delivery with XPLUS automation for testing, discovery, and control.

The problem

The implementation risk gap

Complex modules, scarce skills, and weak visibility drive delays, rework, and cost overruns.

Configuration complexity slows delivery and increases defects

Manual testing becomes the bottleneck, delaying go-live planning

Skilled resources are scarce, pushing timelines off track fast

Hidden gaps surface late, creating disruption after launch

The solution

Deliver with control, not constant change requests

It's time for a proven method that combines delivery discipline with automation-led control.

Dynamics 365 Implementation by XPLUS

Implementation experts who combine hands-on Dynamics 365 delivery with XPLUS automation to reduce cost, risk, and disruption.

Now you can deliver complex D365 programs with CRP structure, clear scope, and XPLUS test automation for a more stable go-live.

- CRP aligns scope, processes, and sign-off early, reducing change and rework
- **Testing by XPLUS** strengthens validation, training, and go-live readiness
- **Discovery by XPLUS** surfaces gaps earlier, reduces manual effort, and helps cut post-go-live issues

 The outcome

The business impact

Deliver a scalable Dynamics 365 foundation with predictable timelines, controlled cost, and fewer post-go-live issues.

- **More predictable delivery timelines**
- **Lower support and maintenance cost**
- **Reduced risk through testing and visibility**
- **Faster optimization and change after go-live**

 Case study

Euronext runs cloud D365 F&SCM across 40+ firms

Euronext moved from AX 2012 to D365 F&SCM, with XPLUS supporting operations across the group.

1,500+

users supported

40+

firms on Dynamics 365 F&SCM

13 countries

included across the group footprint
