Azure DevOps

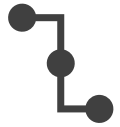

Plan smarter, collaborate better, and ship faster with a set of modern dev services.

Accelerate application delivery through **DevOps**

People

Process

Tools

Are you **struggling** with delivering new features or applications? Do your deployments on production environments often fail because of **dependency**-issues? Are your Development and Operations teams not **collaborating** efficiently?

As a Microsoft Gold partner for **DevOps**, **Application Development**, **Cloud Platform** and **Datacenter**, Xylos has all the expertise it needs to assist you in delivering quality applications faster.

DevOps demystified!

DevOps is not just about running **containers**, using **code versioning** or leveraging **serverless computing**. It's about how you're **organized**, the way you **develop**, **deploy** and **operate** your infrastructure and applications.

It's about creating a **high-trust, collaborative culture**, where we **deploy fast and often**, with the necessary **feedback loops**. This will ensure there will be **no surprises** when deploying into production.

It's also about treating your infrastructure as if it were an application. It's about deploying everything through code and making sure the source code resides in **source control**. It's also about making sure that every deployment creates **predictable results**.

How will Xylos help?

- Guide **organizational change** to encourage a **DevOps culture**
- Analyze and optimize **IT processes**
- Implement **Continuous Integration** and **Continuous Deployment** pipelines
- Assist in creating optimal **application architectures** that fit this model optimally

We'll use a wide range of **tools** during implementation:

- Azure DevOps
- PowerShell
- Ansible
- Octopus Deploy
- Azure Kubernetes Service
- Terraform
- Etc...
