# Identity Security Assessment

## ABOUT our **Identity Security Assessment** :

As managing and safeguarding identities become a higher priority for organizations, many are setting out on the long road to maximizing compliance and minimizing risk. Before taking a single step, however, it's beneficial to understand your current identity positioning first. An identity maturity assessment will consider various aspects of your identity journey to date, scoring against the benchmark. The resulting report will provide suggestions for short, medium, and long-term improvements, in order to point your organization in the right direction.

## WHAT WE OFFER

Our identity Security assessment will check your organization's current Cloud, hybrid or on-premise maturity.

### Agenda:

- Assess

- Design

- Enable
