

# Modern Endpoint Management PoC

## ABOUT our Modern Endpoint Management PoC:

For many IT departments today, the first step toward digital transformation is to determine the right tools and technology to achieve their organizations' business goals. **Modern Endpoint management** plays a key role in that it's often the means to enforce end-to-end security and compliance for the entire organization. Whether it's the types of devices supported, the types of users who'll have access, or what data will be accessible and how, every aspect of every endpoint must meet minimum security requirements. Microsoft Endpoint Manager tools bring together Microsoft security technologies to help address these requirements.

## WHAT WE OFFER

Our Microsoft Endpoint Manager PoC is a scenario-based engagement that addresses Windows 10/11 management, and iOS, Android, and macOS management.

## Agenda:

- Envision and preparation
- Scenarios
- Implementation and validation
