Xylos is an expert in Threat Protection

Prevent and detect threats, hunt for attacks, and coordinate response across domains

Expert-as-a-Service

You have invested quite some time in creating a solid stable IT organization, based on current business needs, IT priorities and technical dependencies. However, you quickly notice that this IT blueprint is in continuous evolution and change.

It's challenging to maintain your IT environment and keep your technology up to date and be aware of new features available. Every specific domain requires the periodic knowledge and experience of a subject matter expert.

Xylos can offer you Expert as a service: an advisory and hands on role that helps you maintain and improve your Threat Protection environment. As a technical Expert he will continuously help you to identify the new requirements and changes that occur within the Threat Protection domain. Where needed, he can count on partners and a team of Solution Architects to align changes into the bigger picture.

As an Expert he will share his broad experience from other customers and projects, while continuously challenging existing certainties and opening minds towards new technical possibilities and opportunities.
