

AI-Led Automated TPRM for Cybersecurity Risk & Threat Management

Streamline third-party risk, reduce supply-chain exposure, and achieve continuous compliance with AI-driven automation

Third-party ecosystems introduce significant cyber risk, yet traditional vendor risk management remains manual, fragmented, and audit-heavy. YASH's AI-Led Automated TPRM solution combines AI-driven insights with an integrated Vendor Risk Management Platform to enable continuous risk scoring, automated evidence collection, and real-time compliance monitoring—helping organizations secure their supply chain at scale.

What this engagement solves

Enterprises often struggle with:

- Limited visibility into third-party risk and vendor security posture
- Manual, time-consuming vendor assessments and onboarding processes
- Inconsistent compliance tracking across multiple frameworks
- Audit fatigue due to fragmented evidence collection
- Lack of continuous monitoring and delayed risk detection

This offering enables **automated, continuous, and intelligence-driven third-party risk management**.

Key Highlights

AI-driven vendor risk scoring and tiering for prioritization

Integrated Vendor Risk Management Platform for centralized workflows

Automated compliance mapping (ISO 27001, NIST CSF, HIPAA, GDPR, SOC 2)

Continuous monitoring with real-time posture dashboards

Automated evidence collection and audit readiness orchestration

Integration with Microsoft Purview, Sentinel, and Defender ecosystem

Closed-loop remediation workflows with SLA tracking

Engagement Approach (Assessment | Implementation | BAU)

Phase 1: Assessment

Activities:

- Identify applicable regulatory frameworks and compliance scope
- Configure Vendor Risk Management Platform for baseline assessments
- Map existing controls to compliance requirements
- Perform AI-driven gap analysis and vendor risk scoring

Benefits:

- Clear visibility into vendor risk exposure and compliance gaps
- Prioritized remediation roadmap based on risk impact
- Strong foundation for continuous compliance

Deliverables:

- Compliance posture report with risk-based prioritization
- Gap analysis and remediation roadmap
- Framework mapping (GDPR, HIPAA, ISO 27001, SOC 2, NIST CSF)

Phase 2: Implementation

Activities: • Configure Vendor Risk Management Platform and/or Microsoft Compliance Manager • Integrate with: • Microsoft Purview for data governance and classification • Microsoft Sentinel and Defender for unified monitoring • Set up: • Automated evidence collection workflows • Control testing and remediation tracking workflows • Compliance dashboards and alerts	Benefits: • Centralized vendor risk and compliance management • Reduced manual effort through automation • Faster audit readiness and certification timelines	Deliverables: • Configured vendor risk and compliance management environment • Automated evidence collection and workflow orchestration • Custom dashboards and reporting templates • Knowledge transfer for compliance and risk teams
--	--	---

Phase 3: BAU (Continuous Compliance & Risk Monitoring)

Activities: • Continuous vendor risk monitoring and compliance tracking • Policy updates and control tuning based on regulatory changes • Monthly/quarterly compliance reviews and audit preparation • Support for external audits and certification renewals	Benefits: • Continuous visibility into third-party risk posture • Reduced audit effort and improved compliance accuracy • Proactive risk mitigation across the vendor ecosystem	Deliverables: • Monthly/quarterly compliance and risk posture reports • Updated control baselines and evidence repositories • Audit-ready documentation and advisory insights
