DevOps Processes Adoption Assessment – 1 Week

YASH's DevOps process adoption assessment consists of a combination of industry best practices for DevOps and process to understand current state of DevOps implementation, business objectives and recommendations on future state

YASH's detailed DevOps process adoption assessment is based on a robust framework that helps in performing detailed analysis of existing automation, collaboration with development practices, testing, security, complete release cycle, monitoring and maintenance of infrastructure and applications. This assessment not only focuses on technical processes but also highlights culture, collaboration and communication aspects of DevOps which should be part of adoption.

This DevOps Assessment will take 1 week and is comprised of 4 phases which have different activities to be performed during this tenure –

- Planning
- Discovery & Assessment for DevOps process adoption
- Architecture recommendations
- Automation strategy

Deliverables –

A presentation contains –

- Current DevOps state overview
- Strategic advice on DevOps process adoption
- Plan on DevOps process implementation
- Architecture recommendations
- Recommendations on tools/technologies
